

THE ADVANTAGE

Our system allows the remote monitoring and control of the livestock and the stables, via internet, from anywhere at any time.

- INCREASING SECURITY
- INCREASING PRODUCTIVITY
- INCREASING EFFICIENCY
- REDUCING LABOR FORCE
- FILTERING OUT HUMAN ERROR

HIGHER YIELD HEALTHIER ANIMALS

The sudden mortality of animals might cause great losses. Our remote monitoring device is a unique and low cost surveillance system. It helps to avoid losses by supervising stables, space of poultry, and helps to increase income and profit.

CASE STUDY

INCREASED EFFICIENCY IN ONE OF THE BIGGEST DOMESTIC FARM

„Our system has been set up in nearly 100 stables, thus monitors more than 400.000 poultry remotely. It measures the environmental parameters (temperature, light, humidity, etc.) and checks the local equipment's condition (electricity, door opening, silo weight, etc.) With the help of the system, we can observe the data from a 100km distance between the headquarter and the stables, and we receive an alert immediately, by email or text message, in case any of extreme values.”
