qulto

for culture & knowledge

Qulto® is the essence of our two-decades expertise gained in the field of **cultural heritage and knowledge management IT**. We unify our cultural and science related software, hardware and content solutions under this brand, which together make up a coherent whole. The name Qulto® also indicates the philosophy we owe our success to: **we think in openness, networks and cooperation.**

Qulto® has competitive advantages in the following areas:

○ Components are **integrated** with open APIs, which makes it possible to sync your data management system in **real time** to your open catalogue, web services or digital exhibits in the physical space.

○ One integrated cloud based system for **all cultural heritage organisations** (libraries, museums, local history collections) that fits into the **smart city** approach.

○ Our experts will **harmonise** your existing datasets with international library and museum **standards,** clean and unify data in order to serve your visitors better and faster.

○ Utilising the benefits of **open-source** software and open API concepts.

○ High **value for money** developer team based in Hungary.*

* 5th overall rating in the world for Hungary. See reference:
