expressions

惊讶 开心 轻松 平静 紧张 生气 伤心
amazed happy relaxed calm nervous angry sad

But Jura is still showing fairytales about printed travel documents.

Whatever is the trend, printed physical travel documents, specially passports, cannot be ignored.

BUT:

Must be solutions for extreme situations, when the chip cannot be verified with:

There are many sophisticated security features in the passports.
But during primary passport control there is no time or knowledge
to check these in foreign passports:

Security
Design

Laminate

UV printed
motive

Thread

The primary check is practically limited to compare data stored in the chip versus printed data.

But:

The inlay in the passport is often damaged, sometimes intentionally.

As per ICAO the passport remains valid with damaged chip.

must always see the face

If the chip does not function the control is limited to check the face of the passenger and the portrait in his/her passport:

Faces change from document issuance to actual document control.

2011

2021

2011

2021

A red, round, angry cartoon character with a wide-open mouth showing sharp teeth, and small, clawed hands and feet. The character has a grumpy expression with slanted, downward-pointing eyebrows. It is set against a dark grey background with a white dot pattern.

As per ICAO Doc 9303

**Forgery is mainly the alteration of a genuine document.
The prime target for such alteration is the biographical details of the
genuine holder, particularly the portrait:**

As per ICAO Doc 9303:

Protection against photo substitution and alteration of data in a passport can be achieved with

(A) Steganographic images:

(B) Additional portrait(s) of holder:

(C) Machine-verifiable features:

Answers No.1 of Jura for Steganographic image:

IPI for the data-page

Personal and document data is stored hiddenly in the Portrait.

Hidden data enables the verification of personal and document data.

Can be inkjet-printed or engraved.

Globally proven and reputed feature.

Verification of IPI:

Answer No.2 of Jura for Steganographic image:

ICI for any page printed with visible or invisible UV ink.

Any motive can be hidden: numbers, barcodes, texts, images.

A simple plastic device decodes the embedded information.

ICI provides very high security and versatility at very low implementation costs.

Answer No.1 of Jura for additional portrait:

LetterScreen, the ideal “ghost image”

Inkjet-printed or Laser-engraved.

Text consists of personal and document data.

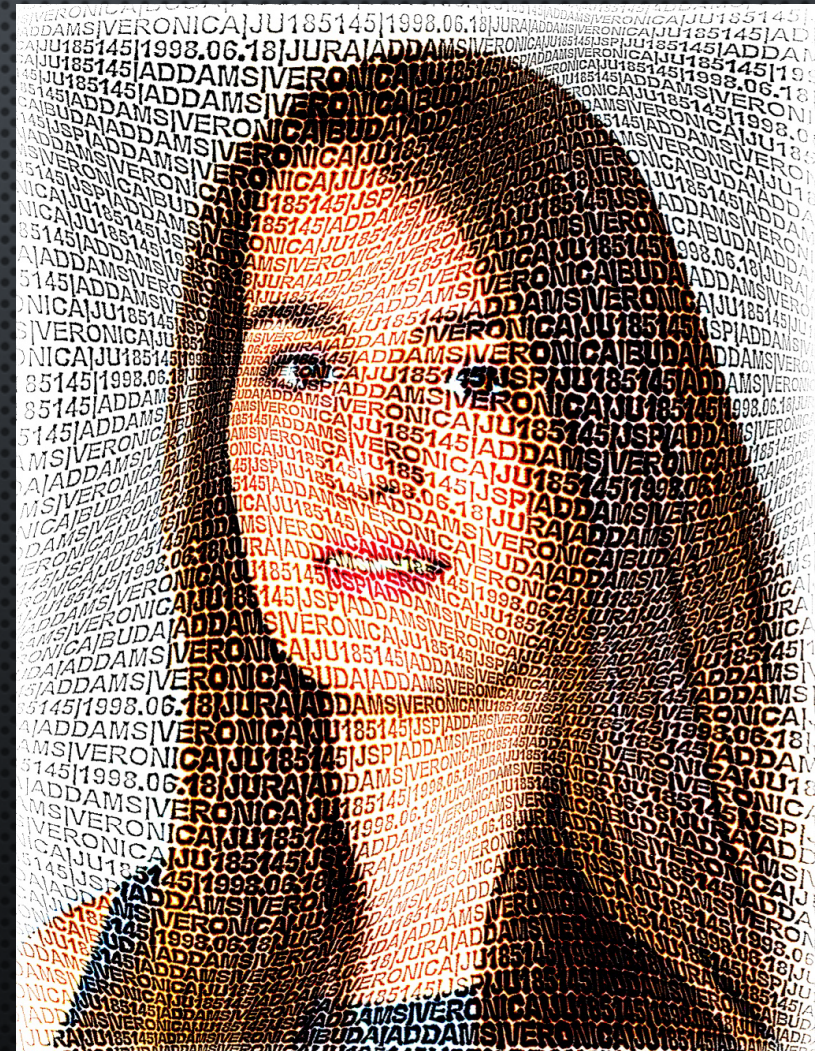

Text is composed of micro letters.

Density of each font is different.

Text is arranged by a unique wave pattern.

Multi-Level Security.

Machine-Verifiable.

Step 1:

From the MRZ data the Jura SW generates a personalized wave structure:

P<JURADDAMS<<VERONICA<<<<<<<<<<<<<<<<<<<<<<<<
6110103974JUR9806180F3001318<<<<<<<<<<<<<<<08

Step 2:

SW generates a full-size redundant text image from the personal data along the personalized wave structure

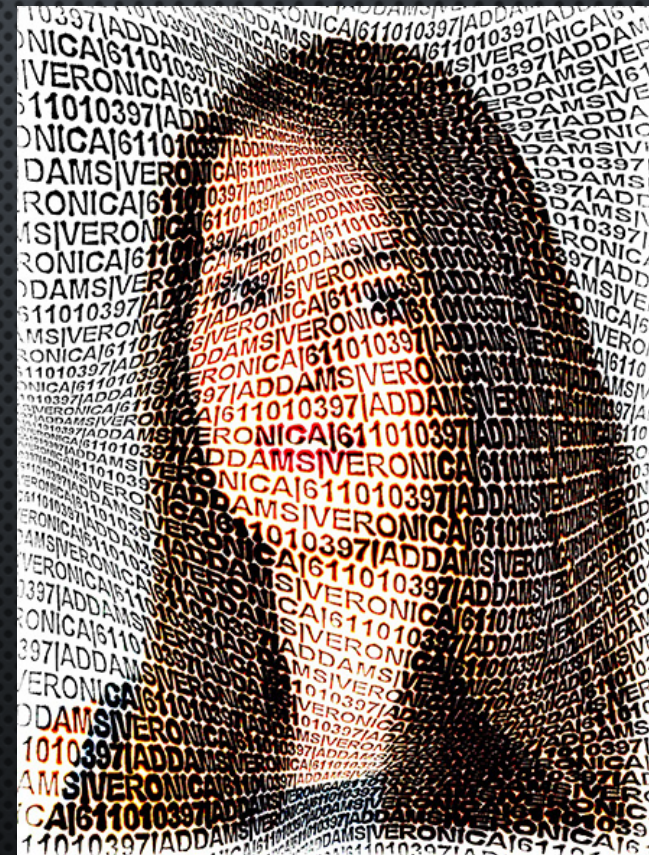

**ADDAMS
VERONICA
611010397
F
1998. 06. 18.**

Step 3:

SW combines the photo with the text-image

Multi-Level Security

Level-1: for everybody

Level-2: machine verification with document scanner:

Application recalculates the wave pattern from same MRZ:

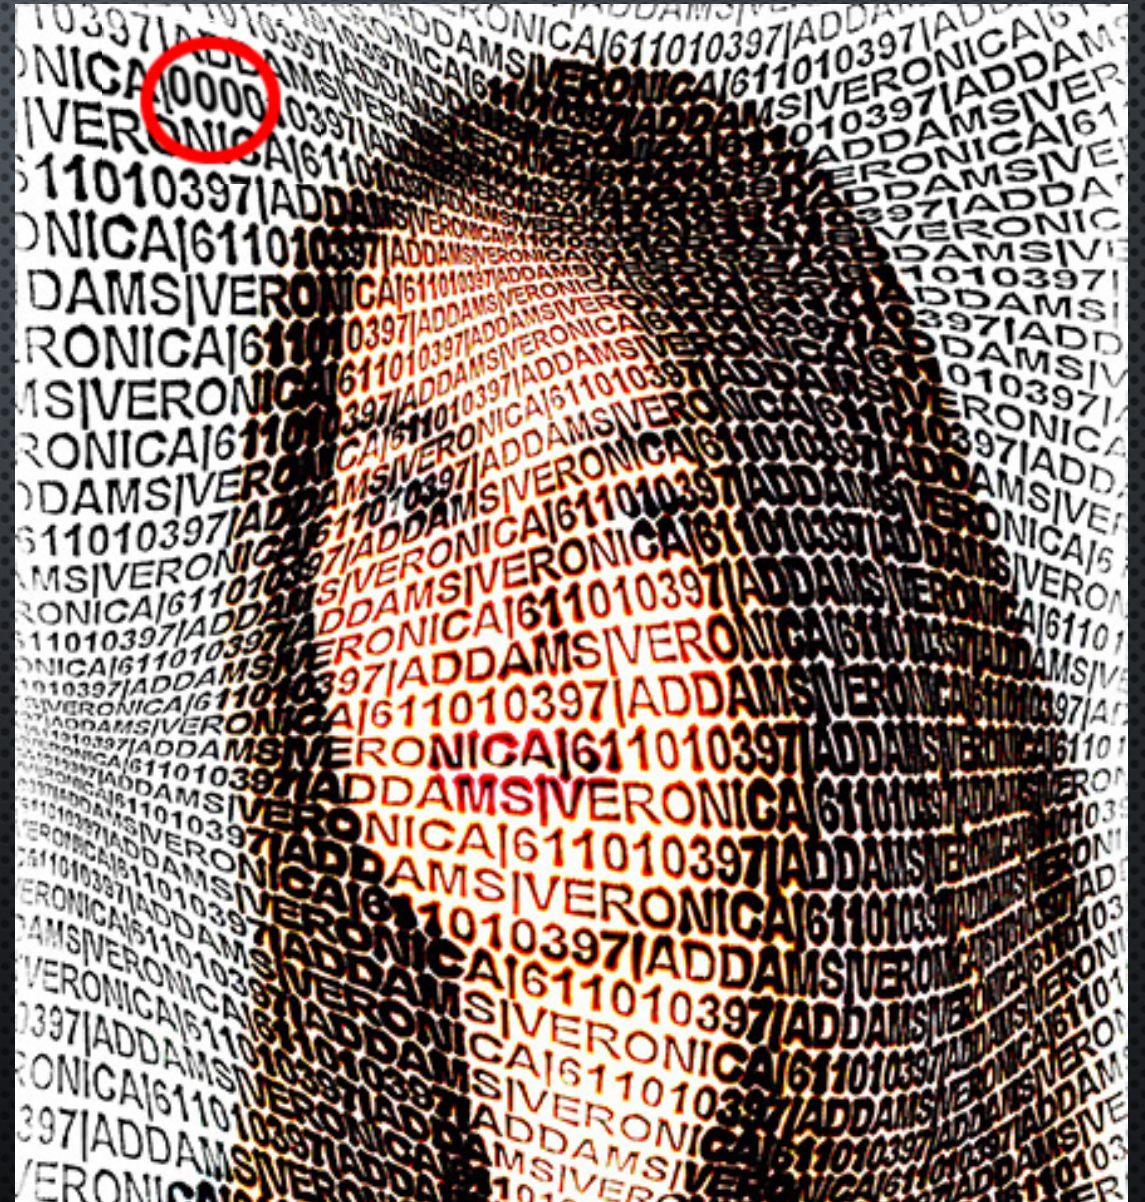

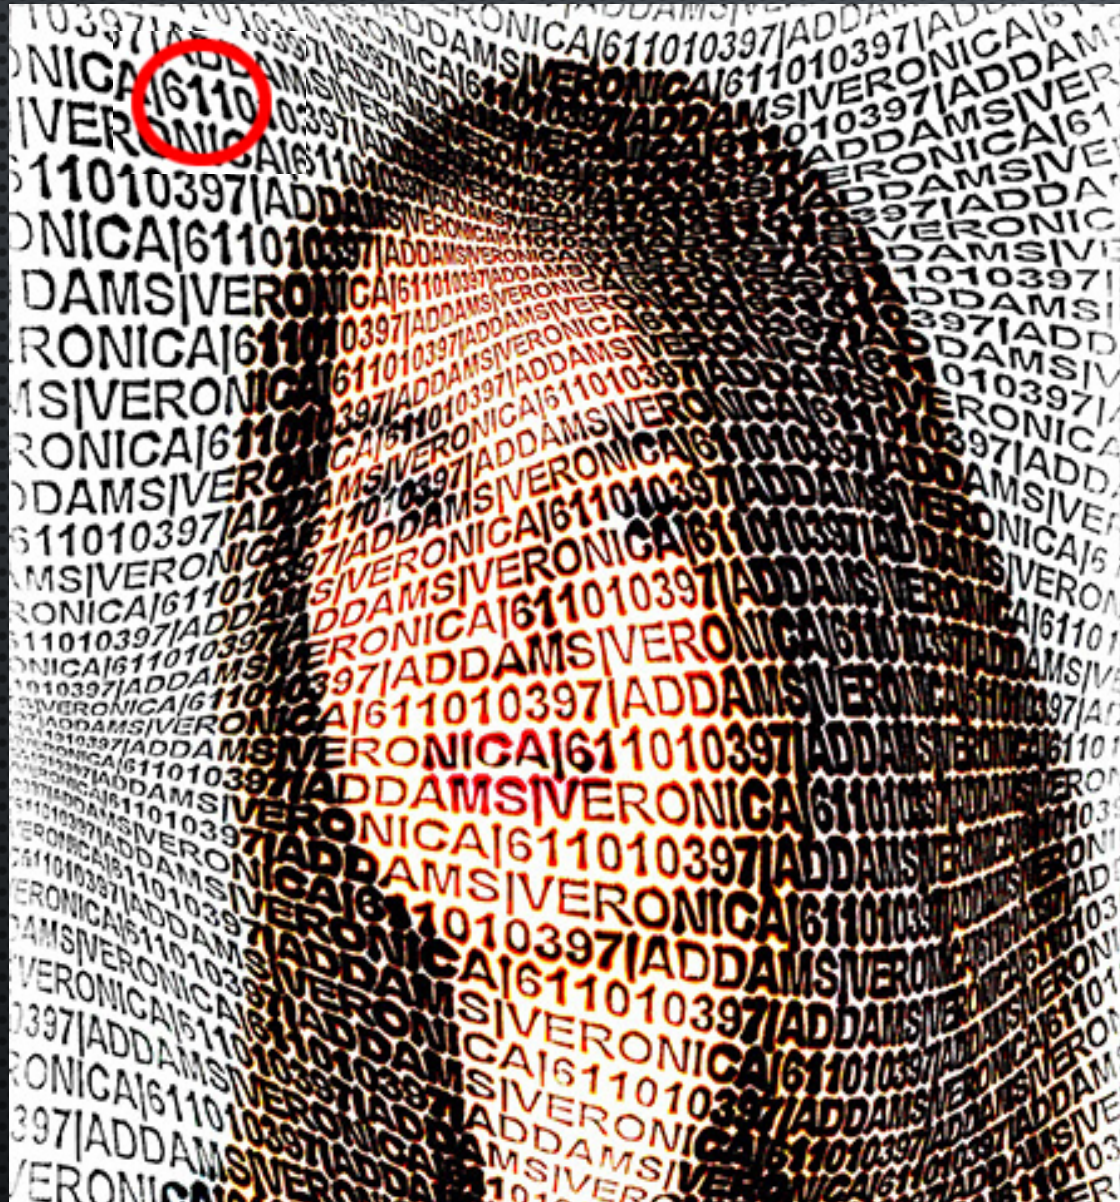

Analyzes waves in LetterScreen

Compares the two wave pattern and shows:

Level-3: Security Markers (deliberate mistakes) known only by forensic experts

Answer No.2 of Jura for additional portrait:

SmartPI, a new additional portrait

Issuer encrypts the data to
a hidden text

```
1010001010001101100101110111100010001001001110
```

SW converts the encrypted data to a
special hidden image and inserts it to the
portrait for printing or laser engraving

SmartIPI offers enhanced security

Lens or lupe do not show the data, only small encrypted motives.

Verification of SmartIPI by an app in the document reader:

Compares data in MRZ and/or in the chip with the hidden data.
Screen shows if hidden-data is correct.
SW warns if document is manipulated.

surname	ADDAMS
givenname	GREGORY
documentno	JU123456
birthdate	2002.01.01
sex	M
dateissue	2012.11.12
dateexpiry	2017.11.12

SmartIPI hides and encrypts personal data in the portrait.

**SmartIPI optimized for smartphone
verification, can be machine verified.
Optimal to protect additional portrait on
passports**

Verification of SmartIPi:

- only with app in electronic devices,
- possible only with the authorization of the document issuer.

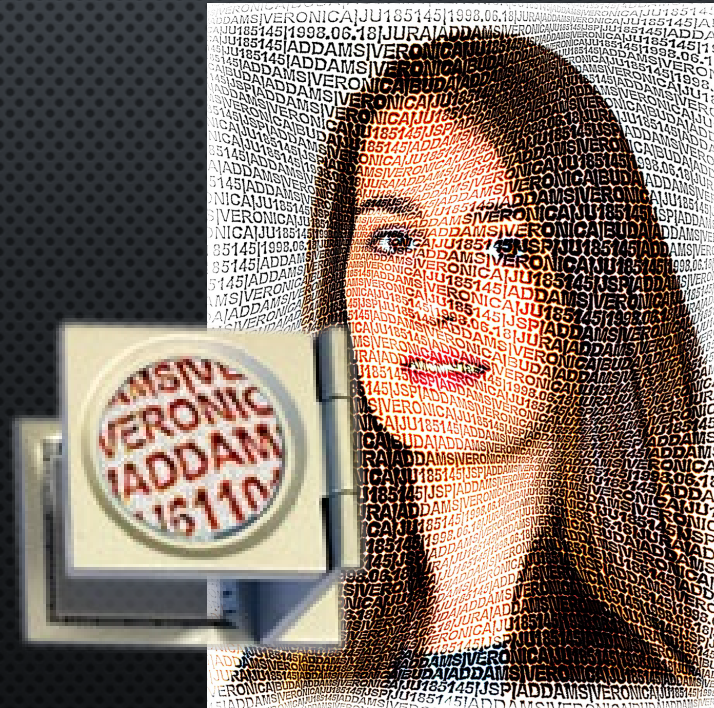

The answer of Jura for machine-verifiable features:

Proven and reputed technologies to protect

- the personal data by the portrait
- and the portrait by the personal data

where there is no document reader and no AFIS/ABIS, or when the document has damaged chip.

All the shown features are compatible with all perso *systems*:

2. Multi-portrait on passports

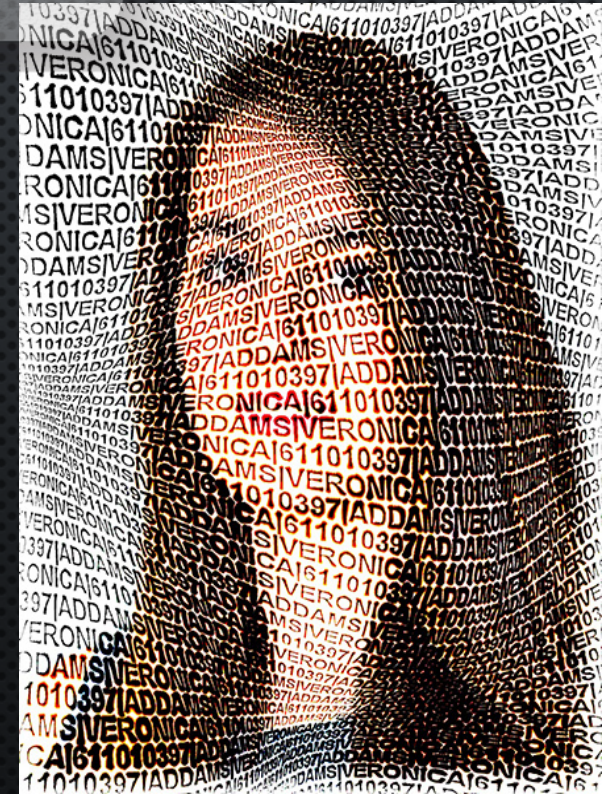

VISA

[illegible]

Jura features meet all global tendencies:

Features for interoperability

Jura features meet all global tendencies:

Features only for forensic verification

Conclusion:

IPI

LetterScreen

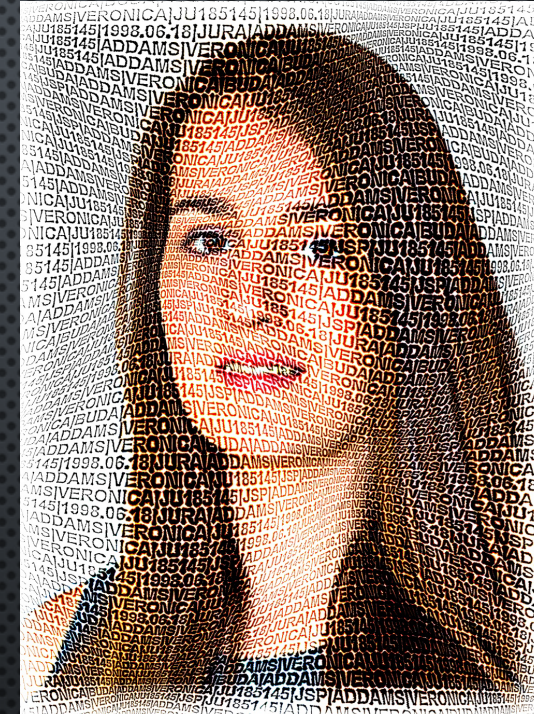

SmartIPI

Strong combination to enhance security

The shown features are all software based = affordable

Several dozens of countries use them to facilitate the document control.
