

AGRI-TECH PLATFORM

Sustainable food production is one of the biggest challenge of the humanity. We create a dynamic hybrid frame to bring the most out of food production by controlled agriculture, breeding and keeping.

FARM42 - CropBooster

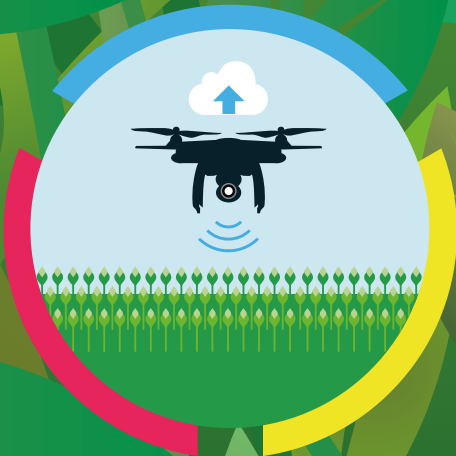

There are hundreds of conditions which influence the efficiency of cultivations. Our hybrid frame enables farmers to steer the cultivation process in a sustainable way with the latest technology.

FARM2 - LiveStockControl

Keeping, feeding and curing supported by an integrated sensorial environment secure higher cost efficiency in the value chain of production.

FARM42 - Wacaca

Climate change makes farmers to manage their waterings better. Our solution gives a dynamic support to use their watering wells efficiently.

FOREST42 - FireGuard

Our preventive system gives back the control to foresters by using a set of sensors and drones and an ever learning software to reduce loss in wildfire.

FOREST42 - TimberMax

To minimize loss of pests and animals our hybrid frame provides the acme tool to keep forests healthy and to be able to work according FSC rules.

AQUA42 - CradleFish

Our solution supports creating healthy environment to grow seaweeds, breeding small to medium size fishes, or molluscs with high cost efficiency.

AQUA42 - FishMarket

Cloud-based application enables stakeholders – fisherman, client, transporter, bank – to keep track on the entire supply chain, and to strengthen the quality of food chain.
