Solutions in the field of WATER SUPPLY,
AGRICULTURE, GARDEN & TURF IRRIGATION, and
TELECOMMUNICATION

WHO WE ARE?

Poliext is a privately held production company situated in Hungary, providing effective solutions in the fields of irrigation, water supply, and construction. Having been founded in 1991, Poliext boasts over three decades of operational experience. Over the years, the company has garnered a reputation for producing high-quality products.

HISTORY

The origin of our company dates back to 1919, with the establishment of the initial privately-owned business by the Skala family. The founder of the company was Mr. Mihaly Skala.

In 1991, the mantle was passed on to Mr. Zoltan Skala, who afterward founded Poliext Csövek Kft. in Hungary. The enterprise commenced production operations on a sprawling 1300 m² area, utilizing three extruder machines and eight employees.

QUALITY

Our quality management system is certified by ISO 9001, and our products by several European certifications (DVGW, KIWA, ÉMI, ITC, ACS, etc.)

SALES NETWORK

We provide high-quality water-saving solutions worldwide. Today Poliext exports to 35 COUNTRIES, on 4 CONTINENTS with more than 1000 REGULAR CUSTOMERS.

OUR PRODUCTS

Besides PE PIPES, our specialty, PP COMPRESSION FITTINGS PN16 are our most important and well-known products. High-quality, massive fitting with NO quality claim. The wide product range has been fulfilled with COMPRESSION BALL VALVES. Besides this, IRRIGATION SECTOR is an equally important part of our production. We produce DRIP-LINE under the brands POLIDRIP and POLIFLAT, as well as FITTINGS and VALVES for DRIP-LINE.

IRRIGATION SOLUTIONS

We offer a complete suite of irrigation system solutions, encompassing design, equipment supply, implementation, commissioning, operation, management, and training. Our team of experts at Poliext is well-versed in the latest technologies and best practices for irrigation systems, specifically tailored for orchards, field crops, and protected crops.

Our primary objective is to optimize the utilization of water, fertilizer, and energy resources, resulting in higher crop yields and superior crop quality. Our technological solutions are designed to address the practical challenges faced by the agricultural sector.

CONTENTS

FEATURED PRODUCTS	4 - 5
IRRIGATION SOLUTIONS	6

PIPES	7 - 15
--------------	---------------

Drinking water pipes	8 - 9
Drinking water pipes PE100	9
Irrigation pipes	10 - 15
Agricultural pipes	11 - 12
Irrigation LDPE pipes	13
White LDPE pipes	14
Other irrigation pipes	15
Layflat hoses	15
PVC Microtube	15
Flex Anti-slip pipe for Pop-up	15
Flex pipe for Pop-up	15

HIGH-PRESSURE FITTINGS	17 - 41
-------------------------------	----------------

PP Compression fittings PN16	18 - 23
PP Compression fittings SKALA PN16	24 - 28
PP Compression fittings PN10	29 - 34
PP Clamp saddles	35 - 37
Threaded fittings	38 - 41
Manifold fittings	42
Layflat fittings	43

DRIPLINE FITTINGS	45 - 59
--------------------------	----------------

Drip pipe fittings	46 - 53
Lock type fittings	47 - 48
Quick joints	49 - 50
Barbed fittings	51 - 53
Drip tape fittings	54 - 59
Tape fittings	55 - 56
Tape fittings with ring	57 - 58
Conic tape fittings	59

VALVES	61 - 74
---------------	----------------

Low-pressure valves	62 - 68
Cylinder MINI valves	63 - 65
Cylinder valves	66 - 68
High-pressure valves	69 - 72
PP Compression valves	70
PP Stop valves	70
Ball valves	71
Garden valve	71
Pressure regulators	72
Check valve & Metallic gate valves	72
Other valves	73 - 74
Quick coupling valve	73
Air releasing valve	73
Drain valve	73
Plastic vacuum breaker	74
Fertilizing equipment	74
Bermad electric control valves	74

FILTERS	75 - 79
----------------	----------------

Plastic filters	76 - 77
Screen filters	76
Disc filters	77
Hydrocyclones	77
Metal filters	78 - 79
AutoFlush® automatic disc filter	78
Automatic double gravel filter	78
Metal screen/Disc Y filter	79
Hydrocyclones	79

Made to fit your needs

Experts from the Polixt team are bringing the know-how and modern technologies in irrigation systems for orchards, field crops, and protected crops.

We are creating a hydraulic map and irrigation system solution based on relevant information:

- Water source characteristics
- Water and soil analysis
- Climatic characteristics
- Google earth map
- Topographic maps
- Planting plan
- Client requirements

Our goal is to optimize water, fertilizer, and energy usage to maximize efficiency and achieve higher yields.

PIPES

Wide selection of Polyethylene (PE) pipes that cater to drinking water, irrigation, and telecommunication applications. Our high-quality pipes are constructed from top-grade virgin High-Density Polyethylene, making them an ideal choice for high-pressure systems and potable water applications. In addition, our irrigation pipes are made from Low-Density Polyethylene, rendering them highly flexible and well-suited for connecting various off-takes (starters), fittings, and drippers.

Drinking water pipes

Crafted from top-of-the-line High-Density Polyethylene (HDPE) material, our PE100 pipes boast exceptional long-term strength properties, ensuring safe and secure transportation of potable water. The lengthy molecular chains of our pipes make them an ideal choice for high-pressure pipeline systems, while their durability and resistance to UV radiation ensures prolonged service life.

We offer PE100 pipes in diameter from Ø16 to Ø400 mm to cater to all your piping requirements.

Standard Dimension Ratio $SDR \cong d/s$

Definition - The numerical designation of pipe series is a convenient round number. Approximately equal to the dimension ratio of nominal outside diameter and the nominal wall thickness.

NOTE

DVGW, KIWA, ÉMI, UBA and OIB certificates are valid for Ø20 mm - 225 mm

Specifications and Technical data

Diameter	16 - 400 mm
Color	Black, with blue stripes
Packaging	50, 100, 200, 300, 500 m rolls, 6 m pipes, or custom made
Operating Pressure	6 – 16 bar
Heat Resistance	-20 – +40°C; however when used over +20°C the lifetime and pressure resistance is decreased - Below +4°C becomes more rigid, and could be easily damaged; - Below -5°C is not recommended for installation
Thermal Dilatation	0.2 mm/m/ °C
Certification	DVGW, KIWA, WIEN-ZERT, ÉMI, UBA and OIB certificates
Standard	ISO 17885, EN 12201
Field Of Use	Cold-water pressure line networking
Methods Of Connection	- PP Compression fittings - Butt fusion welding - Electrofusion fittings

Features

- Long lifetime (even 50 years when placed in the ground)
- UV resistant
- High chemical resistance

Drinking water PE100 pipes

PE100 pipes are the third generation of pipe grade PE. Made from first-class High-Density Polyethylene, providing a safe way to transfer potable water. They are characterized by a long service life and UV resistance. Connection: PP compression fittings, butt fusion welding, electro-fusion welding, and socket fusion.

NOTE

We produce PE pipes also on special request, custom branded and in different lengths.

Irrigation pipes

Irrigation pipes are produced from a softer material for easier installation. High impact resistance and weathering, make it ideal for the most demanding implementation. Unlike steel, PE Pipes can easily bypass obstacles in their path and withstand movements in the ground around them. The fields of use are turf irrigation, open-field irrigation, and greenhouses.

Connection: Mechanical fittings (PP Compression fittings, Clamp saddles, Dripline fittings, Barbed fittings, etc.)

Features

- Long lifetime
- UV resistant
- High chemical resistance

Specifications and Technical data

Diameter	16 - 200 mm
Color	Black, with green stripes
Packaging	50, 100, 200, 300, 500 m rolls, 6 m pipes, or custom made
Operating Pressure	3.2 – 10 bar
Heat Resistance	-20 – +40°C; however when used over +20°C the lifetime and pressure resistance is decreased Below +4°C becomes more rigid, and could be easily damaged; Below -5°C is not recommended for installation
Thermal Dilatation	0.2 mm/m/°C
Field Of Use	Cold-water pressure line networking
Methods Of Connection	• PP Compression fittings • Dripline fittings
Standard	ISO 8779

Agricultural PE pipes

Produced from a softer material. High impact resistance and weathering, make it ideal for the most demanding application. Unlike steel, PE Pipes can easily bypass obstacles in their path and withstand movements in the ground around them. The fields of use are turf irrigation, open-field irrigation, and greenhouses.

NOTE

- We produce PE pipes also on special request, custom branded and in different colors and lengths.

Irrigation LDPE pipes

Irrigation pipes, produced from low-density polyethylene raw material (LDPE) are used in a wide range of applications, including sprinkler & drip irrigation and agricultural & landscape irrigation systems. Thanks to their high resistance to mechanical stress, they apply to all mechanical fittings (PP compression fittings, clamp saddles, dripline fittings, barbed fittings, etc.).

White LDPE pipes

White LDPE 3-layer pipes are primarily used in greenhouses since they reflect light, providing plants with enough light to grow adequately. It is used as a supply pipe for online drippers.

NOTE

Transport Packaging:

Pallet dimensions - pipe diameters 16, 32 and 40 is 120x120
- pipe diameters 20 and 25 is 80x150

Pipe diameter 16: Ø62 cm x 15 cm height - 100 m roll
2400 m / pallet
120x120 pallet size: 110 cm height

Pipe diameter 20: Ø80 cm x 13 cm height - 100 m roll
1600 m / pallet
150x80 pallet size: 130 cm height

Reduce water temperature

Prevents algae

UV resistant

Operating pressure
4 and 6 bar

Multiple diameters

Features & Benefits

- Reflects light instead of absorbing it
- Maintains water at a temperature below that of a black polyethylene pipe
- Prevents the growth of algae and bacteria
- Triggers less dilatation and contraction than a black pipe
- Slows down the chemical precipitation reaction
- Maximizes light reflection in greenhouses
- Made of solid, durable polyethylene
- Due to their high-pressure resistance, the pipes are suitable for installation in longer rows within an irrigation system

Type of connection: Layflat fittings.

Find out more on page 43

The flat hose on flexible PVC is impregnated with polyester reinforcement in one layer. The polyester reinforcement is manufactured between 2 layers of PVC with an anti-delamination system and with reinforced traction capacity.

Advantages:

- Free of industrial waste
- Decreases stretching under pressure
- Anti-delamination
- Perfect for irrigation
- Stretching resistant
- Traction resistant
- Perfect adhesion between layers

OD - Tube outer diameter in mm

ID - Tube inner diameter in mm

Type of connection: Sprinkler accessories. Find out more on page 110

PVC microtubes are used in low-pressure localized irrigation systems, connected to micro-sprinklers and micro-sprayers with the main pipeline, or from drip emitters directly to the plant. Available outer diameters from 5mm to 13mm and inner diameters are from 3 mm to 8 mm, depending on the microtube size.

Connection types for both pipe varieties: Elbow for pop-up and Elbow for pop-up (Spiral barb).

Find out more on page 53

These types of pipes are used to make irrigation with Pop-up sprinkler connections. Flex pipes simplify sprinkler installation, relocation, replacement, and repair. They provide flexibility for better positioning to the desired locations and to get around obstacles, while buffering sprinklers and protecting them against damage. The Flex anti-slip Pop-up pipe is designed for secure handling, even with wet hands, featuring a textured, non-slip surface.

High-Pressure fittings

Fittings manufactured from high-quality plastic are suitable for setting up the water supply and irrigation systems. Poliext provides the whole range of fittings and adapters for high-pressure applications, specially designed to match the performance of our valves and tubing (compression fittings, clamp saddles, threaded fittings, manifold fittings, layflat fittings, etc.)

PP Compression fittings PN16

PP Compression fittings PN16 are designed especially for polyethylene (PE) pipe connection. These fittings are compatible with polyethylene pipes, according to EN 12201.

Our range of compression fittings allows a fast and secure connection of polyethylene tubing for any industrial, commercial or domestic need. Available in diameter from 16 mm to 110 mm and with maximum operating pressure of 16 bar (16-75 mm) and 12.5 bar (90-110 mm).

Features

- Certified by DVGW and KIWA and produced according to EU norms and standards
- Produced from primer raw material. Certified for drinking/potable water
- Precise threads, according to EU standards
- Excellent long-term pressure resistance
- High-quality O-ring, coated with silicone
- Strong clinching ring
- Female fittings are with reinforcing metal ring
- Fitting nut has 4-6 threads, providing stronger connection and better pull-out characteristics

Specifications and Technical data

Size	16-110 mm
Nut	Blue Polypropylene (PP)
Clinching Ring	Polyacetal (POM)
Thrust Ring	Black Polypropylene (PP)
O ring - gasket	Ethylene propylene diene monomer rubber (EPDM)
Body	Black Polypropylene (PP)
Reinforcing metal ring	Galvanized steel
Operating Pressure	16 bar (16-75 mm) 12.5 bar (90-110 mm)
Design	ISO 17885
Size	ISO 3126
Threads	ISO 7-1
Markings	ISO 17885
Quality Management	ISO 9001
Pipes Suitability	Polyethylene (PE) pipes, in accordance with EN 12201
Effect on water quality	According to national regulations
Pull out resistance	ISO 3501
Resistance to internal pressure when subject is bended	ISO 3503, DIN 8076
Resistance to internal pressure (1 hour)	ISO 3458, ISO 1167-1, ISO 1167-2, DIN8076
Resistance to internal pressure (1000 hours)	ISO 13846; ISO 1167-1, ISO 1167-2, DIN8076

NOTE

DVGW, KIWA, WIEN-ZERT, ITC, UBA and OIB certificates are valid for Ø20 mm to Ø75 mm.

ASSEMBLING INSTRUCTIONS

Assembling instruction for fittings Ø16 - Ø40 mm

1
Limber up the nut, but do not remove it completely.

2
Insert the pipe into the fitting. Make sure that the pipe crossed the O ring - gasket.

3
Fully coil back the nut.

4
Assembled PP fitting.

Assembling instruction for fittings Ø50 - Ø110 mm

1
Pull up the nut, the clinching ring, the thrust ring, and O-ring on the pipe.

2
Put together the pipe, O-ring, and thrust ring into the body. Push the pipe until the internal register is inside a fitting. Make sure that O-ring and thrust ring are in their original position.

3
Pull back the clinching ring to its original position.

4
Pull back the nut and fully coil it up to the fitting.

Proposal for easier installation for fittings Ø90 - Ø110 mm

1
Pull up the nut, the clinching ring, the thrust ring, and O-ring on the pipe.

2
Place the pipe into the body of the fitting. O-ring and thrust ring are pushed into place, fully winding the nut.

3
Uncoil the nut, then stretch the clinching ring and place it into the pipe right next to the thrust ring.

4
Pull back the clinching ring to its original position.

IMPORTANT

- The end of the pipe has to be chamfered and cleaned from chips.
- From Ø20 mm to Ø40 mm is enough to coil the nut by hand.
- If the nut is not fixed completely, there can be dripping or flowing at the O ring-gasket or the pressure can set off the pipe from the fitting.
- The threaded end of the PP fitting has to be covered with PTFE (polytetrafluoroethylene) tape or braid.
- The threaded end of PP fitting has to be coiled in completely (useful thread length).
- Above 50 mm diameter, a wrench or tool has to be used to reach the perfect bonding.

- Torque values for tightening nut:

DN	16	20	25	32	40	50	63	75	90	110
Nm	6.5	8	15	18	28	40	65	110	140	240

- Fittings Ø90 - 110 mm:
 - Position the pipe app 5 mm from the internal register, while tightening the nut, it will push together the clinching ring thrust ring, O-ring, and the pipe to the right position.
 - Tighten the nut and make sure that the nut exceeds the last thread of the body, until a 1 - 2 mm gap is left next to the fitting edge.

SOON

PP Compression fittings SKALA PN16

PP Compression fittings SKALA PN16 are specially designed to connect polyethylene (PE) pipes of 16-63 mm diameter. These fittings are compatible with polyethylene pipes, according to EN 12201.

Suitable for transporting water to operating pressure of 16 bar. Operating temperature according to ISO 13761.

1. Additional safety

2. Easier connection

3. Anti-twist protection

Specifications and Technical data

Size	16 - 63 mm
Body	Black Polypropylene (PP)
Nut	Light Blue Polypropylene (PP)
Clinching Ring	Polyacetal (POM)
Thrust Ring	Black Polypropylene (PP)
O ring - gasket	Special elastomeric nitrile rubber (NBR)
Operating Pressure	16 bar
Operating Pressure Test	2 x PN / 1h @ 20°
Pipe Suitability	Polyethylene (PE) pipes, in accordance with EN 12201
Reference standards	
Design	ISO 17885
Markings	ISO 17885
Size	ISO 3126
Threads	ISO 7-1
Internal pressure resistance (1 hour)	ISO 3458, ISO 1167-1, ISO 1167-2
Pull-out resistance	ISO 3501

Features

- Top product quality and reliability
- Excellent price-quality ratio
- Produced according to EU standards
- Strong fitting, excellent pressure resistance, and long-life cycle
- Easy assembling and reassembling

ASSEMBLING INSTRUCTIONS

Assembling instruction for fittings Ø16 - Ø40 mm

Assembling instruction for fittings Ø50 and Ø63 mm

IMPORTANT

- The end of the pipe has to be chamfered and cleaned from chips.
- If the nut is not fixed completely, there can be dripping or flowing at the O ring-gasket, or the pressure can fire the pipe from the fitting.
- The threaded end of the PP fitting has to be covered with PTFE (polytetrafluoroethylene) tape or braid

- Torque values for tightening nut:

DN	16	20	25	32	40	50	63
Nm	5	6.5	11	13	15	23	40

- The threaded end of PP fitting has to be coiled in completely (useful thread length).

NOTE

- Any chemicals in the system are in contact with polypropylene (PP) and the rubber gasket (O-ring) of the PP Compression fitting.
- Appropriate tests have to be done to ensure product suitability and safety following all applicable regulations.

PP Compression fittings PN10

PP Compression fittings PN10 are specially designed for connecting polyethylene (PE) pipes. They are compatible with all pipes according to MSZ EN 12201. Available in diameter from 16 mm up to 63 mm and with a maximum operating pressure of 10 bar.

1. Additional safety

2. Easier connection

3. Anti-twist protection

Specifications and Technical data

Size	16 - 63 mm
Body	Black Polypropylene (PP)
Nut	Green Polypropylene (PP)
Clinching Ring	Polyacetal (POM)
Thrust Ring	Black Polypropylene (PP)
O ring - gasket	Special elastomeric nitrile rubber (NBR)
Operating Pressure	10 bar
Pipe Suitability	Polyethylene (PE) pipe, PE80, and PE100, In accordance with MSZ EN 12201

Reference standards

Design	ISO 17885
Markings	ISO 17885
Size	ISO 3126
Threads	ISO 7-1
Internal pressure resistance (1 hour)	ISO 3485
Pull-out resistance	ISO 3501

Features

- Top product quality and reliability
- Excellent price-quality ratio
- Produced according to EU standards
- Strong fitting, excellent pressure resistance, and long-life cycle
- Easy assembling and reassembling

ASSEMBLING INSTRUCTIONS

Assembling instruction for fittings Ø16 - Ø40 mm

Assembling instruction for fittings Ø50 and Ø63 mm

IMPORTANT

- The end of the pipe has to be chamfered and cleaned from chips.
- If the nut is not fixed completely, there can be dripping or flowing at the O ring-gasket, or the pressure can fire the pipe from the fitting.
- The threaded end of the PP fitting has to be covered with PTFE (polytetrafluoroethylene) tape or braid

- Torque values for tightening nut:

DN	16	20	25	32	40	50	63
Nm	5	6.5	11	13	15	23	40

- The threaded end of PP fitting has to be coiled in completely (useful thread length).

NOTE

- Any chemicals in the system are in contact with polypropylene (PP) and the rubber gasket (O-ring) of the PP Compression fitting.
- Appropriate tests have to be done to ensure product suitability and safety following all applicable regulations.

SOON

PP Clamp saddles

PP Clamp saddles are the ideal solution for branching from existing pipelines for water and irrigation applications. Maximum operating pressure is from 6 up to 12.5 bar - depending on the diameter of clamp saddles and if clamp saddles have or do not have the reinforcing ring.

Specifications and Technical Data

Size	20 - 315 mm
Body	Black Polypropylene (PP)
Reinforcing metal ring	Galvanized steel
Bolts (screws) and Nuts	Galvanized steel
O ring - gasket	Special elastomeric nitrile rubber (NBR)
Operating pressure	Without ring: Ø20-63 - 10 bar Ø75-160 - 6 bar With ring: Ø20-63 - 12,5 bar Ø75-315 - 10 bar
Standard	ISO 13460
Number of bolts	20 - 50 mm (2) 63 - 125 mm (4) 140 - 160 mm (6)
Bolt size	Ø20 and Ø25 - 6x30 mm Ø32-63 - 8x40 mm
Connection hole size (female thread)	Ø20 - 1/2" - Ø10.0 mm Ø25 - 1/2" - 3/4" - Ø12.2 mm Ø32 - 1/2" - 3/4" - 1" - Ø15.4 mm Ø40 - 1/2" - 3/4" - Ø14.6 mm Ø40 - 1" - Ø22.0 mm Ø50 - 1/2" - 3/4" - Ø16.0 mm Ø50 - 1" - 5/4" - Ø22.0 mm Ø63 - 1/2" - Ø15.0 mm Ø63 - 3/4" - Ø18.0 mm Ø63 - 1" - Ø24.8 mm Ø63 - 5/4" - Ø28.5 mm Ø63 - 6/4" - Ø34.5 mm

Features

- Easy to install
- Can be installed on any plastic metric pipework
- Reinforced clamp saddles available
- Resistant to breakage
- Can withstand high impact
- Sturdy construction

ASSEMBLING INSTRUCTIONS FOR PP CLAMP SADDLES

Place the O ring-gasket into the slot under the upper part of the clamp saddle and the steel screws into the bottom part.

Place the bottom part of the clamp saddle on the pipe. Make sure the pipe is clean.

Place the upper part of the clamp saddle on the bottom part.

Coil the steel nut up to their male parts.

Pull each screw with a wrench.

Drill the pipe through the threaded part of the clamp saddle.

Completely assembled clamp saddle.

IMPORTANT

- When drilling the pipe, avoid causing any damage to the thread.
- Use the largest possible size of the jobber drill.
- During the drilling, a piece of a chip can fall into the pipe, causing occlusion.
- If the screws aren't pulled completely, there can be dripping or flowing at the O-ring gasket.
- The threaded connection of fitting has to be coiled in entirely (useful thread length)
- The externally threaded part of the clamp saddle has to be covered with PTFE (polytetrafluoroethylene) tape or braid.

Threaded fittings

Threaded fittings refer to pipe fittings connecting pipes by internal or external threads, and their dimensions are at a maximum of 4 inches in most cases. Thread connection is the oldest way that we still use today. Some of the advantages are simple usage, easy installation, the possibility of disconnection, and convenient maintenance.

Specifications and Technical data

Size	1/4" - 4"
Body	Black Polypropylene (PP)
Operating Pressure	10 bar
Standards	ISO 3458 ISO 7-1

Features

- Simple usage
- Easy installation
- Able to disconnect
- Convenient maintenance

NEW & IMPROVED

Operating pressure: 10 bar
 Body: Black Polypropylene (PP)
 Union Nut: Black Polypropylene (PP)
 O-ring: NBR

Mainly used for making manifold connections for landscape and agricultural irrigation systems. Speeds up installation and simplifies maintenance of the system. Union part of Poliext Manifold fitting is fitted with a thicker O-ring to prevent leaks. Teflon is not necessary for union sealing.

The operating pressure is 10 bar.

Dripline Fittings

Used to join the dripline to the mainline and dripline to each other. Designed to be durable, easy to install, UV- resistant, and to assist in installation and the maintenance of the dripping system.

A wide range of applications is available, like agricultural irrigation, family garden, and greenhouses.

Drip pipe fittings

A wide range of drip pipe fittings simplifies the installation of an irrigation system. The main advantages are the safety of connections, easy assembly, and reassembly without any tool or additional clamp.

Features

- Secure and reliable connection
- Simple, dependable, and inexpensive
- Improve the seal and grip for the various grades of tubing
- Pull-off resistance
- Blow-off resistance
- Ease of installation

Specifications and Technical data

Types and sizes	• Lock Type: 16 and 20 mm • Quick Joint: 16 and 20 mm • Barbed: 3.5 - 63 mm
Body	Black polyacetal (POM) Black polypropylene (PP)
Operating pressure	3 - 6 bar (according to type)
Standards	ISO 9261 ISO 7-1

Operating pressure:	6 bar
Nut:	Black Polypropylene (PP)
Grip ring:	Polyacetal (POM)
Body:	Black Polypropylene (PP)
Recommended pipe wall thickness:	- 16 mm: 0.8 – 1.5 mm (31 up to 59 mil) - 20 mm: 0.9 – 1.5 mm (35 up to 59 mil)
Recommended for:	PoliDrip® and PoliFlat® driplines, Agricultural PE pipes and LDPE pipes

These fittings are recommended for agricultural and landscape irrigation. The redesigned cap makes it fit with the thin-wall pipes and drip tape. Ensures minimum pressure loss in the system parts where it is installed.

The operating pressure is 6 bar. Simple solution provided by wide product range.

ASSEMBLING INSTRUCTIONS FOR LOCK TYPE FITTINGS

- Separate the grip ring and nut from the body.
- Pull the coupling nut up to the end of the pipe.
- Push the ribbed end of the grip into the pipe.
- Insert threaded part of the body on the free side of the grip ring.
- Pull back the nut and coil it completely on the fitting.

Safe and fast way of connecting drip irrigation setup using fix grip ring. Quick joint fittings ensure additional protection even on uneven ground.

They are specifically used for low-pressure connections. The maximum working pressure is 6 bar. A wide range of quick joints is available. From now on, besides 16 mm, a diameter of 20 mm is also available.

ASSEMBLING INSTRUCTIONS FOR QUICK JOINTS

①

Separate the nut from the body.

②

Pull the coupling nut up to the end of the pipe.

③

Insert barbed part of the body on the end of the pipe.

④

Pull back the nut and coil it completely on the fitting.

Operating pressure: 3 bar
 Body: POM - Polyacetal
 Other - Black Polypropylene (PP)

Recommended pipe wall thickness:
 - 16 mm: 0.8 – 1.2 mm (31 up to 47 mil)
 - 20 mm: 0.9 – 1.2 mm (35 up to 47 mil)

Recommended for: PoliDrip® and PoliFlat® driplines, Agricultural PE pipes and LDPE pipes

Barbed fittings are made from black POM (polyacetal) raw material to reach a sharp barb lip which makes a secure connection that is less likely to leak and slip out. Easy twist-in insertion. No need for glue or clamps for installation. A wide range of shapes and sizes allow you to choose the most suitable product for your application.

ASSEMBLING INSTRUCTIONS FOR BARBED FITTINGS

1

Cut the pipe perpendicularly. The end of the pipe has to be straight and clean from the chip.

2

Insert the barbed part of the fitting into the pipe. Make sure that the pipe passes the last barbed ring.

3

Assembled fitting on the pipe.

Drip tape fittings

Drip tape fittings are specifically used for low-pressure connection of drip tapes, with a maximum operating pressure of 3 bar. A simple solution in every situation is provided by the wide product range. Available in diameters of 17 mm and 22 mm.

Ideal for use in irrigation systems both for professional and hobby users.

Features

- Safe and fast way of connecting drip tape
- Easy handling and assembling
- Protection even on uneven ground
- Fast assembly and reassembly
- Wide product range

Specifications and Technical data

Size	17 and 22 mm
Body	Black Polypropylene (PP)
Nut	Red Polypropylene (PP)
Ring	Polyacetal (POM)
Operating pressure	1.0 - 3.0 bar (according to type)
Types	Tape fittings Tape fittings with ring Conic tape fittings
Standards	ISO 9261 ISO 7-1

Operating pressure: 3 bar
 Nut: Red polypropylene (PP)
 Body: Black Polypropylene (PP)

Recommended pipe wall thickness:
 - 17 mm: 0.15 - 0.90 mm (6 - 35 mil)
 - 22 mm: 0.15 - 0.30 mm (6 - 12 mil)

Recommended for: all types of drip tape
 (PoliTape® and PoliFlat®)

Tape fittings secure a safe and fast way of connecting drip tapes. The increased middle part ensures easy handling and assembling and the long grip body helps the tape to be pulled on the fitting easily. The nut gives additional pressure resistance.

**ASSEMBLING INSTRUCTIONS FOR TAPE FITTINGS****Offtake 16 mm**

1 Drill a 16 mm hole on the chosen position in the pipe.

2 Place the gasket in the hole.

3 Push the offtake part of the fitting through the gasket.

4 Screw the nut until you reach the pipe and tighten it by hand.

Drip tape

1 Coil back the nut on the fitting, as much as possible.

2 Pull the drip tape on the fitting. Pay attention that the nut is in its position.

3 While holding the drip tape, tighten the nut with the hand. Make sure it is tighten firmly.

Tape fittings with the ring are for fast and simple connection, ideal for use in irrigation systems for connecting drip tapes. Increased middle part guarantees easy handling and assembling, and a long grip ring helps to pull the tape easily on the fitting. A simple solution for every situation is provided by a wide product range.

ASSEMBLING INSTRUCTIONS FOR TAPE FITTINGS WITH RING

①

Pull back the ring on the fitting, as much as possible.

②

Pull the drip tape on the fitting. Pay attention that the ring is in its position.

③

While holding the drip tape, pull the ring with the hand over the tape, as much as possible. Make sure it is tightened firmly.

Conic tape fittings are specifically used to connect drip tapes with layflat hoses in an irrigation system. The quick and easy installation enables fast assembling and reassembling. You only have to push the body of the fitting into the base - no thread and sealing tape required. No need for a special tool or additional clamp.

ASSEMBLING INSTRUCTIONS FOR CONIC TAPE FITTINGS

Punch the 14 mm hole on the chosen position on the layflat hose.

Insert the base through the hole using the Allen (hex) key. Place it inside the hole and turn it until it is fully inside the pipe.

While holding the Allen (hex) key in place, tighten the wing nut of the base, firmly by hand.

Push the conic part of the fitting into the base. Make sure that it is well fitted.

Assembled fitting on the layflat hose.

Valves

Irrigation valves are used to create various watering zones in an irrigation system. This separation allows different watering devices to be encompassed in a single system. By opening and closing a valve, each zone in your irrigation system can be watered according to the special needs of the zone.

Low-pressure valves

Low-pressure valves are designed in various types as they regulate and control valve flow by opening, closing, or partially obstructing different passageways of the irrigation system. They enable quick and easy installation of drip lines and drip tapes.

Features

- Safe and fast way of connecting drip irrigation setup
- Assures additional protection even on uneven ground
- Specifically used for low-pressure connection
- Special cap also makes it fit the thin-wall pipes (35 mil), standard drip lines and PE pipes
- Simple solution in every situation provided by a wide product range

 Nut: Black Polypropylene (PP)
 Handle: Red Polypropylene (PP)

Our new generation of low-pressure valves for irrigation is available with a maximum pressure of 2 bars. Cylinder MINI valves represent the best mix of performance and value. A diverse product range makes it ideal for various types of irrigation. Mostly, they are used in open fields and greenhouse irrigation.

SOON

Operating pressure: 4 bar
 Size: 16 – 25 mm
 Body: Black Polyacetal (POM)
 Nut: Black Polypropylene (PP)
 Grip ring: Polyacetal (POM)
 Handle: Red Polypropylene (PP)

Low-pressure valves are generally ideal for use in drip irrigation applications (gardens, greenhouses, open field irrigation). Enable setup of drip lines with minimal pressure losses. The operating pressure is max. 4 bar. The large passage hole guarantees minimal load loss in parts of the system where it is installed. The complete range from a diameter of 16 to 25 mm meets all irrigation requirements.

Layflat offtake female

Can be used with any male threaded cylinder valve.

[Find out more on page 43](#)

High-pressure valves

High-Pressure valves are used for compression or/and threaded connection which corresponds to the requirements of a water supply system (potable water and irrigation) and pressures typical in these applications. High-Pressure valves are available in various tubing sizes and body designs to satisfy widely varied requirements.

Features

- Secure and fast connection to the water network
- Suitable for above-ground and underground use
- Operating pressure 10 bar, PP Stop valve operating pressure 16 bar
- Easy solution thanks to the wide product range

Specifications and Technical data

Body	Black Polypropylene (PP)
Handle	Blue Polypropylene (PP)
Design	ISO 17885
Size	ISO 3126
Threads	ISO 7-1
Pressure resistance	ISO 9911

Compression Connections:

Nut	Blue Polypropylene (PP)
Clinching ring	Polyoxymethylene (POM)
O-ring	Ethylene propylene diene monomer rubber (EPDM)
Thrust Ring	Black Polypropylene (PP)
Body	Black Polypropylene (PP)
Markings	ISO 17885
Pull-out resistance	ISO 3501

PP Compression valves PN10

The ball valve connects with the "compression joint method" from compression fittings to reduce the number of connections, combining reliable operation with easy assembling. These valves are valid to be used to conduct water and nutrition fluids. PP Compression ball valves are available in diameter from 20 up to 63 mm. The operating pressure is 10 bar at 20°C (water) engraved on the product.

PP Stop valve PN16

The plastic (Polypropylene - PP) valve connects with the "compression joint method" on both valve sides, with a maximum operating pressure of 16 bar. It is produced from high-quality UV-resistant raw material. Characterized by easy assembling, which speeds up the installation. It has a wide range of applications, used in potable-water systems and irrigation systems, both agricultural and landscape irrigation. Typical advantages of the plastic body are providing resistance against mechanical stress, corrosion, and limescale deposition.

Ball valves

A ball valve is a mechanical device that directs, guides, and modulates water flow by opening or closing a ball that is open in the middle of the valve. Turning the handle on the ball valve, it manually opens/closes the port which controls the pressure of the water flow. Durability and perfect closure are what make the ball valve more favorable compared to other types of valves.

Garden valve

The body is molded from high-impact strength plastic (PP). It is UV, and low-temperature resistant. The inside ball and stem are made of brass. The Garden valve is available with a lever handle or a butterfly handle; the measures of the male thread connection are 1/2", 3/4", and 1". Metal adaptor or garden quick-release can be connected on outlet.

Pressure regulators

Pressure regulators reduce incoming water pressure to set usable pressure for the drip system. The pressure regulator is used when the incoming pressure is too high for the emitters or fittings. The flow rate of the regulator should be matched with the system. Pressure regulation does not take effect until the minimum specified flow passes through the regulator.

Check valves & Metallic gate valves

Check valves (York with a polymer plate, Europa with a stainless steel plate) prevent backflow and work in any position. Made of brass with NBR seals and stainless steel springs, they suit water, heating, air-conditioning, and compressed air systems. Gate valves offer minimal pressure loss and an unobstructed flow path, ideal for above-ground and underground installations.

Other valves

Different types of valves are also available: quick coupling valves, air release valves, drain valves, plastic vacuum breakers, etc. Each of these types has various features and functional capabilities, and some of them are available in different sizes.

Quick coupling valve

The quick coupling valve is a quick and ground-level water plug, reliable and practical for irrigation and gardening. The material is resistant to weather impacts and mechanical stress. Easy assembling: Open the cover, push the key into the quick coupling valve till the hook snaps in place at the body valve and water delivery starts without leaks and wastes. To remove the key, squeeze the upper part of the hook, so the key will be released and the water delivery stops without spillages.

QUICK COUPLING VALVE KEY

Operating pressure: 8 bar

Code	Size	Bag	Box	Stock
07510010	M 3/4"	-	120	✓

Air releasing valve

Air Release Valves' function is to release air pockets that collect at each high point of a full pressured pipeline. An air release valve can open against internal pressure because the internal lever mechanism multiplies the float force to be greater than the internal pressure.

Group 11060

AIR RELEASING VALVE

Plastic vacuum breaker

Manufactured from high-quality raw material. The plastic vacuum breaker offers outstanding features and advantages. It has perfect sealing under considerably low system pressure and high flow capacity. The patented operation, smart design, simplicity, and compactness, shape a highly reliable product. Designed to break the vacuum when the pipe drops below atmospheric conditions. On the subsurface, drip irrigation systems prevent dirt to enter the emitters.

Filters

Water filtration is crucial to almost every irrigation system, both agricultural and landscape irrigation. Appropriate filtration can help extend the lifetime and makes maintenance easier for any irrigation system. For drip or micro-sprinkler emitters, filtration is an essential requirement to avoid clogging.

Plastic filters

The plastic filters are used for filtration in the irrigation system, effectively eliminating sediment and microorganisms. They can be used alone or for secondary filtration.

We offer screen filters, disc filters, and sand media filters.

Screen filters

A screen filter is used for water filtration using a screen to separate sand and other fine particles out of water during irrigation. They have high-quality resistance to the most common chemicals. Constructed of UV - a resistant and durable plastic material that withstands the most adverse circumstances. The screen filter cartridge can easily be removed from the filter to be cleaned, making maintenance more manageable.

Disc filters

The main application of the Disc filter is fine water filtration in irrigation systems. Some of the advantages of disc filters are three-dimensional filtration, therefore the interval between cleaning is longer, resistance to common agricultural chemical fertilizers, and flushing agents used in the system. Disc filters can partially separate algae developed in the irrigation system.

Hydrocyclones

Also known as sand separators, the main use of centrifugal filters is the removal of particles such as sand, and other solids from the irrigation water, in other words, it prevents sand from entering the irrigation system. Using hydrocyclones, parts of dirt with a high specific gravity can be filtered out quite effectively. The liquid is admitted tangentially, which results in a centrifugal flow forcing the dirt parts towards the outer side of the filter.

Metal filters

Obstruction of sprinklers and drippers is one of the most significant problems encountered in irrigation systems. Filtration is the best protection method against avoiding entrance/obstruction of a dripper, sprinkler, hydrant, and other similar equipment used in the irrigation system by sediments.

Therefore, filtration is the most significant control unit of an irrigation system.

Autoflush® automatic plastic disc filters

AutoFlush® automatic plastic disc filter is constructed by assembling many tiny synthetic discs manufactured from polypropylene material on a filter body with a telescopic structure. When synthetic discs are arranged one on another and are centralized around within a telescopic filter body, the center of discs forms a hollow disc. They are designed to perform a deep filtration based on desired micron level found on both sides of synthetic discs and inter-sectioning of channels designed in a crosswise manner. The most outstanding advantage of AutoFlush® automatic plastic disc filter is that it automatically self cleans the filter when it is obstructed.

Automatic double gravel (Sand-Media) filters

Gravel filters are designed for filtration of the river, lake, pool water, and water resources containing organic materials such as lichen and alga. The outstanding advantage of the gravel filters against other types is maximum filtration efficiency due to deep filtration.

Group 08132

Metal screen/disc Y filters

Metal screen disc filters are designed to ensure deep filtration as a consequence of the one-on-one order of many disc sheets manufactured from nylon reinforced polypropylene material on a filter body. Having a simpler design, screen filters are successful infiltration of water wells and water resources containing sand.

Fertigation, automation & irrigation kits

We offer advanced fertigation systems designed to optimize fertilizer efficiency. Automated systems offer real-time monitoring and control, allowing adjustments to be made remotely. Irrigation kits simplify assembly, save time, reduce errors, are cost-efficient, ensure standardization, streamline logistics, improve quality control, and are user-friendly.

Fertigation

Simplefert

Polifert

Ferticontrol

Simplefert

Manual fertigation unit for precision fertilizer injection into the irrigation system. Fertilizer is added through manual venturi injectors, allowing for manual adjustment of the flow rate on each venturi injector.

Product specifications

Max flow rate of each venturi injector	• 400 l/h
Minimal system flow rate	• 5 m³/h
Working pressure	• 1.5 - 5 bar
Number of venturi injectors	• 1 - 2

* Simplefert is delivered without a controller, the choice of which is adapted to the user's requirements.

Polifert

Automatic fertigation unit for precision fertilizer injection into the irrigation system. Fertilizer is added through automatic venturi injectors managed by the controller.

Product specifications

Max flow rate of each venturi injector	• 400 l/h
Minimal system flow rate	• 5 m³/h
Working pressure	• 1.5 - 5 bar
Number of venturi injectors	• 1 - 3

* Polifert is delivered without a controller, the choice of which is adapted to the user's requirements. It is optional to add EC and PH sensors.

Ferticontrol

Ferticontrol is a complete controller for the control of irrigation and fertilization, totally configurable and with multiple possibilities of use, communication and extension. Equipped for irrigation control, fertilization, pumping and filter cleaning, with fault detection and detailed chronological recording of events and historical accumulation. Fertigation set controlling the process of fertilizers injection while maintaining the desired levels of EC and pH of the treated water. The unit is installed as part of an injection setup as a bypass to the mainline.

Product specifications

Max flow rate of each venturi injector	• 400 l/h
Minimal system flow rate	• 5 m³/h
Working pressure	• 1.5 - 6 bar
Number of venturi injectors	• 1 - 5

Automation

Agrónic 2500

Agrónic 5500

Agrónic 4500

Sensors

Agrónic 2500

A versatile irrigation controller suitable for medium-sized installations, providing reliable control and simple user interfaces for optimized water usage.

Product specifications

- Flow error detection
- Up to 4 sectors simultaneously
- EC and pH monitoring
- Web application

Agrónic 5500

A top-tier irrigation controller featuring robust connectivity, smart scheduling, and intuitive management for complex systems, ensuring maximum irrigation efficiency.

Product specifications

- Real-time flow monitoring
- Up to 9 sectors simultaneously
- EC and pH monitoring and control
- Monitoring and management via sensors
- Web application

Agrónic 4500

A high-performance irrigation controller designed for large-scale systems, offering advanced scheduling, water efficiency, and easy integration with other systems.

Product specifications

- 4 different systems, up to 20 sectors
- Pump station management (PID control, 4x6 pumps)
- Flow monitoring and control on 4 systems in real-time
- EC and pH monitoring and control
- Monitoring and management via sensors
- Web application

NOTE

Each Agrónic controller offers a range of additional accessories, including remote control options and various upgrade devices. Due to the extensive selection, we recommend choosing a controller based on your system's specific needs. For assistance in selecting the appropriate model, please contact our technical experts for assistance.

Sensors

Our advanced sensors and weather stations provide precise data on climate, plant health, and soil conditions, ensuring optimal irrigation and growth.

Weather station

Set of meteorological sensors, arranged in a compact assembly to be mounted on a single mast. The integrated sensors are:

- Temperature (inside sunscreen)
- Relative humidity (inside sunscreen)
- Solar Radiation
- Rain gauge (0.2 l)
- Anemometer
- Vane

Each one of the sensors has a specific connector that can be connected to a junction box where the feeds and reading signals are centralized to a single 12 m cable to connect it to the controller that will read the sensors. The unit is equipped with a bird deterrent system to avoid birds.

Compatible with all controllers from our offer.

Multi-sensor for reading soil water content, temperature and conductivity Drill&Drop

Formed by different tri-sensors (soil water content, temperature and conductivity) installed along its length. Since it is installed perpendicular to the surface of the land, the provided measurements show the characteristics of the soil profile under study. The maximum distance of a connection via SDI-12 bus is 50m. We have a kit for the installation of the sensor that we can lend.

Compatible with:

Agrónic 2500
Agrónic 5500

Leaf moisturization sensor

Dielectric sensor that reads moisture on the surface of the leaf. It is easy to install and has a high accuracy. The sensor, placed as if it were one more leaf of the plant, imitates the true humidity state of the leaves, measuring the dielectric constant of the top of the sensor.

Compatible with all controllers from our offer.

Sap flow sensors

Sensors to monitor the relative variations of the flow of sap.

Compatible with all controllers from our offer.

Filter station kits

Filtration of irrigation water in case the water source is a well. Possibility of connecting the fertigation machine to the designated connections. Measurement of water consumption through a water meter.

Product specifications	
Connection dimensions	• 6/4" • 2" • 3"
Maximum flow rate	• 6/4" - 11 m³/h • 2" - 18 m³/h • 3" - 30 m³/h
Minimum flow rate	• 6/4" - 7 m³/h • 2" - 11 m³/h • 3" - 20 m³/h

Group of control valves with secondary filtration

Pressure reducing valves with electromagnetic solenoid for control of irrigation zones.

Product specifications	
Valve size	• 1" • 6/4" • 2"
Number of valves	• 1 - 3

Group of control valves

Pressure reducing valves with electromagnetic solenoid for control of irrigation zones.

Valve size	• 1" • 6/4" • 2"
Number of valves	• 1 - 3

Micro irrigation

The micro irrigation system is effective in saving water and increasing water use efficiency. It helps reduce water consumption, growth of unwanted plants (weeds), soil erosion, and cost of cultivation. Micro irrigation is a low-pressure, low-volume irrigation system suitable for high-return value crops such as fruit and vegetable. By guaranteeing higher yields and quality at lower costs, it offers further crop enhancement through fertigation. ***A filter must be installed before every drip irrigation system.***

Driplines

The most suitable living conditions for the plants. The drip irrigation system is the most efficient way to irrigate your tree crops and orchards. Water drips slowly to the plant roots saving water and nutrients. A drip line system also helps conserve water, which is more of a consideration in areas where water supplies might be limited.

Features

- Provides the most suitable life conditions for the plants
- Makes it possible for the water with the nutritive materials to get to the roots of the plants in a short way
- Provides an appropriate proportion of the water and the air in the soil. The ideal circumstances for the development of the plants
- Guarantees considerable quantity of the yield and a better quality besides lower expenses
- Reduces the weeds, and so the costs originating from this
- The simple operation and control of the irrigation system save a lot of time and costs
- Water application efficiency is high if managed correctly
- Fields with irregular shapes are easily accommodated
- Recycled non-potable water can be safely used
- Soil erosion and weed growth is decreased
- Water distribution is highly uniform, controlled by the output of each nozzle
- Fertigation can easily be included with minimal waste of fertilizers
- Foliage remains dry, reducing the risk of disease
- Usually operated at a lower pressure than other types of pressurized irrigation, reducing energy costs
- Dripline irrigation can greatly reduce or eliminate water waste while promoting healthier plant growth

Poliext drip irrigation system operating guidelines

Physical filtration requirements

- When using a drinking water network, the minimum physical filtration requirement is 130 microns (120 mesh).
- When using subsurface water, the minimum filtration requirement is 100 microns/140 mesh for emitter discharge rates below 1 l/h, and 130 microns (120 mesh) for rates above 1 l/h.
- In the case of heavily sandy water, a hydrocyclone followed by a 130 microns (120 mesh) steel mesh or disc filter must be installed.
- When using surface water, a media filter (sand filter) should be used; if the water is not sandy, then a disc filter should be used.
- When using a fertilizer injector, a 130 micron (120 mesh) steel mesh or disc filter must be installed after the device.

Requirements set against the quality of irrigation water

The first and most important condition for the flawless operation of Poliext drip irrigation systems is ensuring proper irrigation water quality. Adherence to the limit values for the irrigation water shown in the table below is a fundamental requirement for the flawless operation of drip irrigation systems; exceeding the limit values of individual elements in the irrigation water can also cause clogging and blockage of the emitters.

Observance of the operating pressure and maximum installation length

Observing the operating pressure and maximum installation length is product-specific; these values are available in our product catalog. Depending on the extent of use, it is recommended to flush the system multiple times during the season with open pipe ends.

Max. limit values of elements in irrigation water

Suspended solids	< 100 mg/l
pH	< 9.0
Total Dissolved Solids	< 1500 mg/l
Manganese (Mn)	< 0.5 mg/l
Iron (Fe) (mg/l)	< 1.5 mg/l
Calcium (Ca) (mg/l)	< 50 mg/l
Hardness (CaCO ₃)	< 200
Bacteria concentration	< 50.000 /cm ³

Please contact our technical experts for assistance with planning and installation!

PoliFlat driplines

Used to deliver the water directly to the roots of plants. Dripline has emitters placed at intervals along the pipe which correspond with the placement of each plant. This ensures that water is delivered directly to each plant's root zone. This method of irrigation is not only very precise and efficient, but it also saves water because of low water discharge and minimized evaporation loss.

PoliFlat T-500 PC Ø16 mm 0.65 - 1.0 - 1.5 - 2.0 - 3.5 l/h

Dirt ingestion is a risk for all drip irrigation systems. The unique long outlet pool of the Polixt T-500, in conjunction with the raised wall design, provides the maximum distance between the emitter outlet and the tube hole to help prevent dirt suckback. The full size pool also allows a true slit outlet in all configurations.

NEW PoliFlat T-500 PC/AS/ND

State-of-the-art dripper and Polixt precision manufacturing with high-quality control brings us to the very top in drip irrigation technology. With one of the widest flow regulating ranges available, PoliFlat T-500 PC/AS/ND provides outstanding uniformity even on undulating terrain or long run lengths. This helps ensure that your crop at the end of rows receives the same amount of water as that at the start for more consistent yields.

Specifications and Technical data

Size	Ø16, Ø20, Ø22 mm
Operating Pressure	0.5 - 3.5 bar (according to type)
Wall thickness	0.65 - 1.2 mm (25 - 47 mil)
Flow rates (l/h)	0.65, 1.0, 1.5, 2.0, 3.5

Features

- Exceptional clogging resistance using cutting edge world-leading technology
- Max flexibility - 5x flow rates and multiple wall thickness options
- More efficient
- Clogging resistance
- Uniform crops

PC SYSTEM (PRESSURE COMPENSATING)

for uniform irrigation even with fluctuating pressures within the pipe

- **Application:** sloping terrain and long laterals
- Pipe drains at system shut down

AS SYSTEM (ANTI-SIPHON)

where the risk of soil ingestion at shut-off is high

- **Application:** SDI, or on surface with sandy soil
- Water from the pipe slowly drains reducing the suction effect of soil particles into the dripper at system shutdown

ND SYSTEM (NO DRAIN)

short and frequent irrigation cycles where the water needs to stay in the tube during shut-off

- **Application:** pulse irrigation
- **Sealing Pressure:** 0.14 bar. Pipe remains filled with water at system shutdown.

NEW PoliFlat T-450 PC/AS

Dripline that achieve uniform flow rates over flat and sloping ground. Ensure crop uniformity over a wide range of conditions with this flow regulating drip line. For use with multi-season vegetables, orchards and vineyards on sloping ground or where extra-long run lengths are required. Available with an anti-siphon option for sandy conditions where soil-suck back is a risk.

Features

- Uniform crops
- More efficient irrigation
- Irrigate longer run lengths with uniformity

Specifications and Technical data

Size	Ø16, Ø20, Ø22 mm
Operating Pressure	0.5 - 3.5 bar (according to type)
Wall thickness	0.65 - 1.1 mm (25 - 45 mil)
Flow rates (l/h)	1.0, 2.0

Elevation: 5.0 m

Pressure: 1.5 bar (the pressure at start of lateral)

Actual flow rate for 2.0 l/h Non-PC drip line: 2.0 l/h

Actual flow rate for 2.0 l/h Polix T-450 PC/AS

T-450 PC/AS drip line: 2.0 l/h

Elevation: 0.0 m (variation -5.0 m)

Lateral length: 125 m

Pressure: 1.9 bar (increased pressure due to gravity)

Actual flow rate for 2.0 l/h Non-PC drip line: 2.5 l/h (+25%)

Actual flow rate for 2.0 l/h Polix T-450 PC/AS

T-450 PC/AS drip line: 2.0 l/h (constant)

NEW**PoliFlat T-200 Non-PC**

When you are using a medium or heavy wall drip line, you want an emitter which will perform for multiple seasons without failing. Introducing the PoliFlat T-200 emitter. Developed using the latest in drip line engineering technology, the mandate for the emitter was to build a product that did not compromise on size or features.

Specifications and Technical data

Size	Ø16, Ø20
Operating Pressure	0.5 - 3.5 bar (according to type)
Wall thickness	0.65 - 1.1 mm (25 - 45 mil)
Flow rates (l/h)	1.0 - 8.0 (according to type)

Features

- Maximum clogging resistance with 64 - 93 individual inlets in every dripper
- High velocity design keeps particles in suspension around the dripper

PoliDrip driplines

Used to deliver the water directly to the roots of plants. Dripline has emitters placed at intervals along the pipe which correspond with the placement of each plant. This ensures that water is delivered directly to each plant's root zone. This method of irrigation is not only very precise and efficient, but it also saves water because of low water discharge and minimized evaporation loss.

Size: Ø16 and Ø20 mm
Operating Pressure: 1.1 – 1.5 bar
Wall thickness: Ø16: 1.0 - 1.1 mm
Ø20: 1.1 - 1.2 mm

PoliDrip Non-PC driplines

Non-PC dripline is used for applications when a drip irrigation system is required for orchards, vineyards, and greenhouses with regular plant spacing with NO slope. Built-in Quality and Durability from premium polyethylene and additives for resistance to UV degradation. Comes in various types and sizes 16 and 20 mm in diameter.

PoliDrip® Non PC

**AGTERA Non-PC dripper**

Only in Ø16 mm, 2.0 l/h and 4.0 l/h dripline

Compact NON-PC dripper with unique clogging resistance, for well water. The Agtera dripper employs an extra-large flow path cross-section, long labyrinth, and elevated filter - agricultural dripper with excellent clogging resistance.

ADVANTAGES AND BENEFITS

Exceptionally Uniform Flow - Dripper CV of <3% ensures flow uniformity between drip outlets.

Compact - long flow path and economical size.

High Performance - Longer pipe runs with <0.5 emitting exponents and 2:1 pressure loss to flow loss.

Design - The specialized design eliminates labyrinth dead zones to maintain consistent turbulence, reduce the settling of suspended solids and prevents clogging.

Highly Clog-resistant - The long labyrinth and large cross-sectional design ensure sedimentation on the labyrinth surface does not clog the emitter.

Elevated Filter - The elevated filter draws from water closer to the pipe center, where water travels at high velocity keeping the filter surface clean. The elevated filter entrance inhibits solids from setting on it between flow cycles, regardless of dripper orientation in the pipe.

Built-in Quality and Durability - Constructed with 100% premium virgin polyethylene and additives. Resistant to UV, commonly used chemicals and fertilizers.

**Poliext Non-PC dripper**

Only in Ø20 mm dripline

- Delivers uniform flow
- Clog-resistant and low maintenance.
- Durable and resistant to UV radiation.
- The flow varies on uneven terrain. Every dripper emits a different quantity of water depending on its location on the drip line.
- Excellent for vineyards and permanent crops that require minimal elevation and pressure variations.
- Excellent for gravity irrigation systems, as they require no pressure to work.

PoliDrip PC driplines

The pressure-compensated dripline is ideal for permanent crops such as vineyards and orchards with the ground with slope and regular plant spacing. PC pressure-compensated drippers deliver a uniform flow rate no matter how difficult topographical or water conditions. This product is produced with a "PC2" dripper, which is characterized by a large turbulent flow path, double filtration inlets, and a wide pressure compensation range. The dual self-flushing mechanism significantly decreases maintenance time.

**PC dripper**
pressure compensated

Flow Rates: 1.5 - 4.0 l/h
 Flow Rates/Diameter: 16 and 20 mm
 Dripper Spacings: minimum 20 cm
 Wall Thickness/mm: Standard 1.0 - 1.1
 Outlet Type: 4 hole outlet
 Operating Pressure: 0.5 - 3.5 bar

**Applications**

The PC dripper is designed for precision irrigation, delivering consistent and reliable water distribution season after season. It ensures uniform application of water, fertilizers, and other chemigation inputs, making it ideal for agricultural environments where accuracy and efficiency are critical.

Features and Benefits

- Exceptional Flow Accuracy
 - Low Coefficient of Variation (CV) ensures minimal differences in flow rate between drippers, providing uniform irrigation.
 - Low exponent value minimizes the impact of pressure fluctuations on emitter performance.
- Optimized Crop Growth
 - Delivers even water and nutrient distribution, preventing over- and under-irrigation.
 - Meets and exceeds global quality standards for drip lines.
- Stable Flow Over Time
 - Advanced pressure-compensating mechanism prevents variations caused by membrane aging.
 - Maintains reliable performance, preventing long-term fluctuations that can impact crop yield and system hydraulics.
- Easy Installation
 - Four-outlet design eliminates concerns about orientation, allowing quick and hassle-free installation.

Specifications

- Pressure-compensated dripper for consistent flow
- Low CV and exponent for high uniformity
- Long-term flow stability with minimal variation
- Four-outlet configuration for flexible installation

PCND dripper no drain pressure compensated

Available in 16 mm dripline

Flow Rates:	1.35 - 2.35 l/h
Diameter:	16
Dripper Spacings:	33 cm
Operating Pressure:	0.75 - 3.5 bar

No drain pressure compensated dripline is used for applications when a highly reliable and accurate dripper is required (pulse irrigation, subsurface, and highly undulated ground, also ideal for greenhouse applications). The No-drain system option provides that the dripline remains full of water between irrigation intervals, ensuring immediate and uniform irrigation along the dripline. Available only in diameter 16 mm.

APPLICATIONS

Pulse irrigation, subsurface, and highly undulating ground are ideal for greenhouses.

FEATURES AND BENEFITS

In addition to pressure compensating, the dripper seals when the pressure drops below 0.1 bar to stop water from draining out of the tube at shut off.

NOTE

- PoliDrip PC (No Drain) we DO NOT keep on stock.
- For more information please contact our sales department.

Size: Ø16 and Ø20 mm
 Operating Pressure: 1.1 – 1.5 bar
 Wall thickness: Ø16: 0.8 - 0.9 mm
 Ø20: 0.9 - 1.0 mm

PoliDrip Light Non-PC

Thin-wall Non-PC dripline is used for applications when the drip irrigation system is required for orchards, vineyards, and greenhouses with regular plant spacing with NO slope. Built-in Quality and Durability from premium virgin polyethylene and additives for resistance to UV degradation. Comes in various types and sizes range from diameter 16 and 20 mm.

AGTERA
Non-PC dripper

Only in Ø16 mm,
2.0 l and 4.0 l dripline

Compact NON-PC dripper with unique clogging resistance, for well water. The Agtera dripper employs an extra-large flow path cross-section, long labyrinth, and elevated filter - agricultural dripper with excellent clogging resistance.

ADVANTAGES AND BENEFITS

Exceptionally Uniform Flow - Dripper CV of <3% ensures flow uniformity between drip outlets.

Compact - long flow path and economical size.

High Performance - Longer pipe runs with <0.5 emitting exponents and 2:1 pressure loss to flow loss.

Design - The specialized design eliminates labyrinth dead zones to maintain consistent turbulence, reduce the settling of suspended solids and prevents clogging.

Highly Clog-resistant - The long labyrinth and large cross-sectional design ensure sedimentation on the labyrinth surface does not clog the emitter.

Elevated Filter - The elevated filter draws from water closer to the pipe center, where water travels at high velocity keeping the filter surface clean. The elevated filter entrance inhibits solids from setting on it between flow cycles, regardless of dripper orientation in the pipe.

Built-in Quality and Durability - Constructed with 100% premium virgin polyethylene and additives. Resistant to UV, commonly used chemicals and fertilizers.

Polixt SG
Non-PC dripper
Only in Ø20 mm dripline

- Delivers uniform flow
- Clog-resistant and low maintenance.
- Durable and resistant to UV radiation.
- The flow varies on uneven terrain. Every dripper emits a different quantity of water depending on its location on the drip line.
- Excellent for vineyards and permanent crops that require minimal elevation and pressure variations.
- Excellent for gravity irrigation systems, as they require no pressure to work.

Size: Ø16 and Ø20 mm
 Operating Pressure: 0.5 – 3.5 bar
 Wall thickness: Ø16: 0.8 - 0.9 mm
 Ø20: 0.9 - 1.0 mm

PoliDrip Light PC

Thin-wall pressure compensated dripline ideal for permanent crops such as vineyards and orchards on uneven land or with regular plant spacing. PC Online pressure-compensated drippers deliver a uniform flow rate no matter how difficult the topographical or water conditions are. The PC2 dripper is characterized by large turbulent flow path, double filtration inlets and a wide pressure compensation range. Dual self-flushing mechanism significantly decreases maintenance time.

**PC dripper
pressure compensated**

Flow Rates: 1.5 - 4.0 l/h
 Flow Rates/Diameter: 16 and 20 mm
 Dripper Spacings: minimum 20 cm
 Wall Thickness/mm: Standard 1.0 - 1.1
 Outlet Type: 4 hole outlet
 Operating Pressure: 0.5 - 3.5 bar

Applications

The PC dripper is designed for precision irrigation, delivering consistent and reliable water distribution season after season. It ensures uniform application of water, fertilizers, and other chemigation inputs, making it ideal for agricultural environments where accuracy and efficiency are critical.

Features and Benefits

- Exceptional Flow Accuracy
 - Low Coefficient of Variation (CV) ensures minimal differences in flow rate between drippers, providing uniform irrigation.
 - Low exponent value minimizes the impact of pressure fluctuations on emitter performance.
- Optimized Crop Growth
 - Delivers even water and nutrient distribution, preventing over- and under-irrigation.
 - Meets and exceeds global quality standards for drip lines.
- Stable Flow Over Time
 - Advanced pressure-compensating mechanism prevents variations caused by membrane aging.
 - Maintains reliable performance, preventing long-term fluctuations that can impact crop yield and system hydraulics.
- Easy Installation
 - Four-outlet design eliminates concerns about orientation, allowing quick and hassle-free installation.

Specifications

- Pressure-compensated dripper for consistent flow
- Low CV and exponent for high uniformity
- Long-term flow stability with minimal variation
- Four-outlet configuration for flexible installation

NOTE

- We produce PoliDrip pipes also on special request, with different dripper spacing and coil length.
- For more information please contact our sales department.

Drip tapes

Thanks to emitters placed close to each other, PoliTape provides the most suitable life condition of the plants by watering the root zone. Allows the water and the nutritive materials to get to the roots of the plants in a short way. Guarantees higher quantity of the yield, simple operation and control of irrigation system, saving a lot of time and costs. The cheapest solution for low water quality.

Features

- Precisely shaped emitters for high uniformity of flow
- The turbulent flow-path design provides a high degree of resistance to clogging
- Available in a wide range of wall thicknesses, outlet spacings and flow rates
- High resistance to tensile and cracking
- Strong material resistance to abrasion reduces land damages
- Thanks to the versatility and reliability it is easy to install and reduces your work time
- The production of the system and its quality is in accordance with ISO 9261.

Specifications and Technical data

Tape material	Polyethylene (PE)
Distance between drippers	10 cm - 40 cm
Emitter discharge	0.6 – 2.3 l/h/m
Emitter type	• Continuous labyrinth • Flat emitter
Color	Black with white stripe
Wall thickness	6 – 8 – 10 – 12 mil
Diameter	16 mm
Operating pressure	0.7 – 1.0 bar
Field of use	• Greenhouses • Vegetables • Growing ornamental plants • Short-term cultured plantations • In cases where because of water quality is not cost effective to place dripping pipe system
Operating terms:	• Expert planning and installation • Non-return and air valve inst. • Physical, biological and chemical filtering (min. 150 mesh) • Fertilization and acid treatment
Standard	ISO 9261

Tape material:	Polyethylene (PE)
Package:	100/500/1500/1800/ 2300/3000 m
Dripper flow rates:	0.6 / 1.0 / 1.5 / 1.8 l/h
Dripline diameters:	16 / 22 / 29 mm
Dripline wall thickness:	0.15 - 0.30 mm (6 - 12 mil)
Recommended filtration:	120 mesh / 130 micron
Recommended filtration, flow rate below 1.0 l/h:	150 mesh / 100 micron

FIELD OF USE

- Greenhouses
- Vegetables
- Growing ornamental plants
- Short-term cultured plantations
- If water quality is not cost-effective to install a dripping pipe system

Features

- High resistance to clogging
- Optimal choice for seasonal use
- Double colored strip to identify drippers side
- High resistance to traction
- From 10 to 30 cm drippers spacing
- High-quality materials

09218120	20 cm	5.0	✗
09218130	30 cm	3.3	✗

The design of a constant labyrinth provides high resistance of temperature blockage and longer use of the system, and therefore more rational utilization of water.

PoliFlat®

Emitters positioned with double filtration providing maximum protection against clogging. A low coefficient of variation provides high uniformity in the use.

FILTRATION
Large Filter Area
Highly Clog-Resistant

LABYRINTH
Wide Labyrinth
with Turbulent Flow

PoliFlat

PoliFlat® is the drip tape model with flat emitters. Emitters with double positioned filtration provide the highest clogging protection. The largest area of filtration on the market is set over the entire length of the emitter. Extrusion technology utilizes high-quality specially developed polymers, renowned for their firmness and flexibility. These polymers were developed especially for use in industrial and agricultural environments. The entire production is performed according to standard EN ISO 9261.

FIELD OF USE

- Row crops
- Landscaping
- Greenhouses
- Vegetables
- Sugarcane
- Industrial crops
- Gravity systems
- Small household plots

Features

- Highly cost-effective dripper
- Optimal choice for seasonal use
- Compact and efficient
- Wide labyrinth with turbulent flow (prevents particle settling)
- Large filter area in relation to dripper size
- Highly clog-resistant

PoliFlat® Length of the row depending on field uniformity

Ø16 mm								Ø22 mm							
Max. Lateral Length, ID 15.8 mm, WT 0.3 mm, Slope = 0%, Inlet pressure: 1.2 bar								Max. Lateral Length, ID 21.2 mm, WT 0.3 mm, Slope = 0%, Inlet pressure: 1.2 bar							
Dripper flow rate	Space between drippers							Dripper flow rate	Space between drippers						
	20 cm	30 cm	40 cm	50 cm	60 cm	75 cm	100 cm		20 cm	30 cm	40 cm	50 cm	60 cm	75 cm	100 cm
0.65 l/h	152	197	236	272	306	352	405	0.65 l/h	139	182	220.4	237	287	331.5	399
1.0 l/h	103	135	163	189	213	246	296	1.0 l/h	103.6	135.9	164	190.5	214.2	247.5	298
1.6 l/h	78	103	125	144	163	188	262	1.6 l/h	76.4	100.5	121.6	141	158.4	183	221

* Customized spacing between drippers is available upon request.

Technical Data

Drip Line Nominal Diameter	Inside Diameter (mm)	Wall Thickness (mm)	Min. Working Pressure (bar)	Max. Working Pressure (bar)	Kd
PoliFlat 16 mm	15.8	0.15 - 0.3	0.5	1.0 - 1.8	0.15
PoliFlat 22 mm	21.2	0.3	0.5	1.5	0.05

* Note: max. pressure in the lateral is according to the diameter and W.T. specification.

Table for calculating flow rates vs. pressure

Dripper	a - coefficient	b - exponent
PoliFlat 0.6 l/h	0.2039	0.4695
PoliFlat 1.0 l/h	0.3179	0.4975
PoliFlat 1.6 l/h	0.5494	0.4641

Based on exponential regression formula: $q = a \cdot P^b$
 q (l/h) - dripper flow rate | a (unitless) - coefficient (empirical)
 P (m) - pressure | b (unitless) - exponent (empirical)

Fittings and valves for drip tapes

- Safe and fast way of connecting drip irrigation setup
- Easy assemble and reassemble, no tool or additional clamp required
- Assure additional protection even on uneven ground
- Specifically used for low-pressure connection

On-line drippers used to be mounted on LDPE or Agriculture PE pipes from 16 mm and higher diameter. On-line drippers provide easy installation and are easily mounted by punching a hole on the pipe. The minimum filtration capacity of the filter used in the system shall be 130 microns. Online drippers are ideal for orchards, vineyards, and greenhouses with irregular plant spacing, offering high reliability, precision, and efficiency while minimizing clogging issues. They are easy to clean and perfectly suited for trees and bushes.

Sprinkler irrigation

Sprinkler irrigation is a method of applying irrigation water that is similar to natural rainfall. Water is distributed through a system of pipes usually by pumping. It is then sprayed into the air through sprinklers so that it breaks up into small water drops which fall to the ground.

Features

- Land leveling is not required
- No loss of cultivable area due to channel construction
- Suitable for almost all soil types
- Water-saving irrigation intensity can change by the infiltration capacity of the soil and crop water requirements
- High efficiency due to uniform water distribution
Water management can adapt to growth stages and conditions
- Possibility of irrigating for other purposes: sprouting, frost protection, or cooling during hot periods
- Lower labor requirements as compared to traditional surface irrigation approach

Advantages

- Elimination of the channels for conveyance, therefore no conveyance loss
- Suitable to all types of soil except heavy clay
- Suitable for irrigating crops where the plant population per unit area is very high.
- Water saving
- Closer control of water application convenient for giving light and frequent irrigation and higher water application efficiency
- Increase in yield
- Mobility of system
- May also be used for undulating area
- Influences greater conducive micro-climate
- Areas located at a higher elevation than the source can be irrigated
- Possibility of using soluble fertilizers and chemicals
- Less problem of clogging of sprinkler nozzles due to sediment-laden water

Impulse sprinklers

Impulse Sprinkler is a type of irrigation in which the sprinkler head is driven in a circular motion by the force of the outgoing water. The impulse sprinkler's long spray radius and uniform water distribution re-create the effect of natural rainfall.

Microsprinklers

Microsprinkler irrigation saves water because of the high application efficiency and high-water distribution uniformity with small waste. Microsprinklers and microsprayers provide low precipitation rates, allowing longer watering time. Field of applications: nursery, greenhouses, orchards, and vegetables.

Garden

Garden irrigation is a watering system that is used in residential and commercial landscaping. The primary function of a garden and landscape irrigation system is to ensure that water is spread regularly and evenly throughout any given landscape.

Valve boxes

The Valve box is specifically designed to create a safe and secure environment for the valves, fittings, wires, and manifolds, in other words, the components of an irrigation system. It protects against vandalism, the elements, and damage due to mowers, string trimmers.

Features

- Easy access to buried irrigation control valves
- Protects essential components of your irrigation system
- Durable Construction
- Lightweight and easy handling
- Fast, trouble-free, and cost-saving installations

Anti-vandalism
screw option

Specifications and Technical data

Type	• Rectangular valve box • Circular valve box • Valve box with 3/4" valve • Valve box cover • Valve box rack • Valve box riser • Valve box mounting grid
Field of use	• Residential • Agriculture • Sports irrigation systems
Materials	Body - Black UV stabilized polypropylen Cover - Green UV stabilized polypropylen Screw - Galvanized steel
Color	• Black body, Green lid
Standard	EN 124

Material: 100% Polypropylene

Classification: UNI EN 124 A class A 15 (Peak load > 15 Kn)

Handle & Antivandalism screw option

Plastic grass grid

A modern and stable solution for covering the ground in both domestic and commercial applications. It strengthens the soil, protecting against erosion. Plastic grids provide exceptional ground reinforcement as well as water drainage in a variety of applications. It does not crack, it is permeable, and will not dry out grass or cause flooding.

Features

- Form and size allow for independent installation
- Easy setup, without any special instrument
- Durable, eco-friendly, and easy to maintenance
- Its environment protective material is UV and heat resistant
- Unique interlocking click system
- Grass stabilization
- Lawn protection

Application

- Driveway grids & gravel parking
- Grass or gravel car parks
- Driveways and residential lawn

Filling

- Soil
- Gravel
- Stones (size: 5-9 mm)

Installation guide for gravel / grass filling

Form the shape of the area using a rope. Take out the soil to the appropriate depth and level the base keeping a 1.5% slope.

Apply the crush stones (dimensions: 0 - 60 mm), make a layer and compact it mechanically.

Apply another layer of crush stones (dimensions: 2 - 4 mm), and even out with a traversing rule.

Compact it mechanically.

Begin in the corner and install grids in rows. Keep a minimum 5 cm gap between the edge and grid cover. The locking system indicates the installation direction.

Merge the grids with the locking system and press down strongly (use a foot or rubber mallet). If required, cut the grids with an angle grinder or a blade to fit.

Level out the grid surface using a compactor or a garden roller.

Gravel fill - Fill the grids with the gravel and compress it mechanically.

Grass fill - Fill the grass saver with prepared mixture of fertile soil, peat, and sand (4:3:2). Water thoroughly - manually or use automatic irrigation to settle the mixture. Sow seeds evenly in each cube.

IMPORTANT:

The technical description is not specific! Please, contact us before installation.

Grass saver raster

Material: 100% polyethylene that can be recycled

Contact surface area: 2510 cm²/m²

Grass Saver Raster is a plastic covering element that can be connected. Modern, stable floor grids for those who are looking for an alternative to concrete or asphalt for their property or public areas. This is a particularly individual form of floor fastening that is used in many different everyday applications - Parking spaces, Logistics & Storage space, Erosion control, Driveways & Paths, Home & Garden, Forest & Agriculture and Equestrian sports.

* Dimensional tolerance up to 2%

Features

- Made from 100% recycled materials
- UV stable / resistant
- Easy to install
- Pre-assembled EcoRasters can be taken directly off pallets, in layers, and easily be laid on the ground
- Fixing points for connecting to the ground
- T-shaped locking system provides firm and secure connection

Eco grass grid

Material: 100% polyethylene that can be recycled

Contact surface area: 3400 cm²/m²

The Eco Grass Grid can be filled with soil and grassed as the cell structure and open base promotes unrestricted root growth. The Eco Grass Grid can also be filled with gravel providing a high-quality decorative look. The cell structure retains the gravel and prevents loss or gravel displacements. Perfect for laying strengthened new lawns, just interlock the grids, fill with soil and sow the seeds.

- Good drainage
- Automatic irrigation system
- Economical water consumption and no waste
- Space-saving
- Interchangeable plant pots

↻90-180↻
Modular

BLOCKAGE FREE DRAINAGE

Built-in reservoir overflow system

Poliext Green Walls are a revolutionary modular solution, with a built-in **Flow Through** and **Overflow reservoir** system in each pot, preventing overwatering of the plant and root rotting.

The Flow Through system - Water drips on the topmost row and moves down to each succeeding row to ensure all plants are appropriately watered.

The Overflow Reservoir system - collects excess water. Excess water flows through the openings in the bottom of the pot.

Our recommendation is not to close the openings at the bottom of the pot because excess water drains through the openings preserving the plant healthy.

All you need to do is water the top planter, and excess water automatically makes its way down to the lower planting pots.

Installation guide

- Position the panel and mark mounting holes
- Drill holes
- Attach the frame with screws and dowels
- First, place the tube through the pot liner, and put them together into the pot
- Add plants to the pots
- Hang the pots on the frame

Water Timing & Control

Add an irrigation timer for even more convenience. Poliext offers easy to operate and very reliable irrigation timers.

IMPORTANT

Do not seal the holes at the bottom of the pots. Sealing holes blocks water drainage and can lead to root rot.

When adding soil to the pots, make sure it doesn't get into the irrigation pipes.

Implement an additional vertical drip irrigation system after every set to ensure evenly distributed water flow across the pots.

NOTE

Please check the bearing capacity of the surface you are mounting the Living Green Wall, according to the weight of the pots when they are full. When covering larger areas with the Living Green Wall modules, a substructure is necessary.

Place a drip tray for excess water accumulation and drainage under the Living Green Wall panels, especially for indoor installations.

For the best results, please consult your horticulture specialists.

Heliflex home garden

To make your garden flowers happy give them water with pipes and hoses from Heliflex.

Heliflex, when your house and garden are our concern!

Equipment, tools & accessories

Without proper tools and equipment irrigation system would not function properly. Polixt offers a range of specialized irrigation tools, equipment, and accessories to help you do the job right.

Our products will support you to install, maintain and repair irrigation system a whole lot easier.

Equipment

Different equipment available depending on the kind of system and the type of installation. Often, installations have a similar structure, so most additional irrigation requirements can be solved with a relatively small range of equipment - ground hooks, supporting hooks, support zip - tie, silicon wire connection, PVC tying string, marking table, rubber sealing rings, etc.

The general terms of sale hereby stated apply to all orders received by the Seller after the issue of this pricelist and will be considered as accepted in full upon placement of order by the CUSTOMER.

PRICES

- Prices are Ex-Works (INCOTERMS: EXW) and include standard packing costs.
- Special packing if requested upon placement of order and accepted by the Seller will be charged extra.
- Prices are subject to variation without any prior notice.
- Minimum order value is 500 EUR in case of export. Any order placed under given value 15 EUR management fee is charged.
- Our sales prices fixed in EUR, but if the CUSTOMER requests HUF price can be used based on daily exchange rate of Hungarian National Bank published on the date when invoice created.

PRODUCT ORDERS

- Orders must be placed electronically or in writing according to codes and descriptions as per pricelist.
- Quantities must be adjusted to standard packing.
- Orders can be dispatched in successive stages.
- The CUSTOMER does not have the right to cancel entirely or partially the order.

PRODUCT MODIFICATION

The Seller reserves the right to make alterations that are considered necessary for the best operation of products as referred to in a pricelist without adversely affecting the use and initial function. This does not constitute reason for the CUSTOMER to withdraw orders or to claim compensations or reimbursements of any kind.

DELIVERY OF PRODUCTS

- Products are sold Ex-Works (INCOTERMS: EXW).
- If means of transport are not clearly indicated by the CUSTOMER, delivery will be carried out in cost-saving way and according to the best knowledge, as much as possible.
- Products are transported at the CUSTOMER own risk BECAUSE the products are sold EXW.
- Insurance is provided only if requested and is charged to the CUSTOMER.
- The Seller does not have any responsibility for damages incurred during transport.
- The CUSTOMER is obligated to inform immediately the freight company upon receipt of products for shortages or damages of the goods and to state if such has occurred on the bill of delivery.
- The Seller reserves the right to suspend the delivery of products if at any time receives information that the CUSTOMER is in a financial position that would create any doubt as to his solvency or the CUSTOMER has delayed payments from previous supply of products. The CUSTOMER informed in writing about any suspend the Seller make in case of delivery.

GUARANTEE

- Warranty is limited to repair and/or replacement of our products whose failure is due to material or manufacturing defects attributable to Poliext. Warranty is limited to the repair or replacement of defective products with the complete exclusion of any other responsibility, particularly with the exclusion of any compensation or acknowledgement of the damage caused by the use of our products.
- The warranty does not cover the following defects:
 - If the consumer does not comply with the rules on use, transport, storage, installation and operation.
 - The presence of traces of exposure to substances aggressive to the materials of the product.
 - The presence of damage caused by fire, natural disaster, force majeure.
 - Damage caused by incorrect actions of the consumer.
- The Seller, who undertakes the warranty in order to fulfill the contract, or have legal duty to provide warranty, is obligated to take responsibility for incorrect fulfillment, during the warranty period, based on the warranty statement or the terms of law. The Seller is exempt from warranty, if proved that the cause of fault aroused after fulfillment.
- The warranty claim can be validated during warranty period. In case if the Seller does not fulfill the warranty obligation – on time - despite the CUSTOMER notice, the Warranty Claim can be endorsed in the court of law for 3 months passed the warranty period. The omission of the warranty term results forfeitures of its right.
- In case of incorrect fulfillment based on the edict of 151/2003. (IX.22.) for each durable consumer goods, the Seller is obligated to warranty, if the CUSTOMER is qualified as consumer according to Civil Code. The obligated warranty valid for the goods listed in the attachment of the above-mentioned edict.

• Based on the edict 151/2003. (IX.22.) about the detailed norms of contracts between the consumer / CUSTOMER and Companies, the warranty period is divided according to the value:

- o If the selling price is between 10.000 HUF and 100.000 HUF, warranty period is 1 year.
- o If the selling price is between 100.000 HUF and 250.000 HUF, warranty period is 2 years.
- o If the selling price is above 250.000 HUF, warranty period is 3 years.

• The rules of edict 151/2003. (IX.22.) should be used for contracts between the consumer/ CUSTOMER and the Seller.

• For the goods turned over by us, we undertake 1 year warranty based on Hungarian law, except all the Pedrollo pumps, which warranty is indicated by the producer.

• The warranty lost its validity in case if the CUSTOMER did not use the product as intended.

CLAIMS

- The CUSTOMER must check the received goods. If the claim is not justified, the costs of diagnostics and examination of the product are paid by the CUSTOMER.
- All claims must be submitted electronically or in writing within 7 days from receipt of products or defects discovered.
- No claim will be accepted for goods which have not been paid.

RETURNED PRODUCTS

- Claims for return of merchandise should be made within 7 days from delivery date.
- No returns will be accepted without any prior notice electronically or in writing, and above all firstly approved by the Seller.
- Returned merchandise should be perfectly packed and freight prepared.
- Returns of special orders with special characteristics are not accepted.
- Credit notes issued shall be deducted from following invoices.

OWNERSHIP

Delivered products remain the Seller's property until they are fully paid.

PAYMENTS

- In no case as well as for no reason, the CUSTOMER cannot postpone payment beyond the agreed terms of payment according to the relevant issued invoices.
- In case of delayed payment, the legal current interest rate will be charged as defined in Civil Code.

COMPETENT COURT

- The Seller/ service body intend to settle disputes by peaceful negotiation procedure based on signed contract. If the Seller/ service body and the CUSTOMER failed to negotiate peacefully, and still have legal disputes or to any future disputes arising out of a particular legal relationship - based on transaction value - Kecskeméti District Court will have jurisdiction of the district court for any disputes and Kecskeméti Court of Justice exclusive jurisdiction of the general court for all disputes.
- The jurisdiction stipulated by the parties does not affect the right of the CUSTOMER who are consumers according to the Civil Code, in case of claims arising out of a contractual relationship with the Seller/service body, the CUSTOMER/ consumer has the right to settle disputes to competent court of the CUSTOMER'S residence or commorancy.
- In case of any issue arise regarding text of General Terms of Sale because of the understanding of Hungarian and English version, always Hungarian version is the standard to be used.
- Legal relationship is according to Hungarian Law.

VALIDITY AND ACCEPTANCE

- These conditions are to be considered valid and applicable and accepted by the CUSTOMER.
- This pricelist is subject to change without prior notice and fully replaces all previous versions.

Kecskemét is located near the middle of highway M5, which connects Hungary's North and South.

The shortest way to reach Matkó is following Exit 91 to Kecskemét-Dél (Kecskemét-South). Afterward, choose subway No. 54 by turning left to Soltvadkert. The white POLIEXT sign will be on the right side of the road. At this point, you have to take off road 54 by turning left. Drive straight till the POLIEXT Company's facility is seen on the left side. Follow our map, from Exit 91 to Poliext Company, drive 5,5 km.
