

The business of Creatiger is primarily based around geosynthetic materials. Our activities date back to 2010, consisting of waterproofing installations, liner fabrication and distribution.

Installation

Our main business is waterproofing installations in civil engineering. Most of our projects are done in Hungary and include artificial ponds and canals. In addition, we also install liners for structures for secondary containment purposes.

We rely on proven materials and innovative technologies to provide our customers with long-lasting and cost-effective solutions.

Fabrication

We work with materials that can be prefabricated to the world's largest, single sheet waterproofing liners. An important part of our activity is the fabrication of these liners to custom sizes. These prefabricated sheets can be used for e.g. lining ponds, waterproofing buildings and covering structures.

Our technology enables us to work with geotextiles as well. As such, we fabricate these materials to huge sheets as well.

Trade

We also distribute the materials we fabricate and install.

We supply geosynthetic materials for road construction, sport facilities and other applications.

We maintain a significant trade relationship with the agricultural sector as well, where we distribute cover materials and supplementary products.

The way we work

We organize our business to be able to provide our customers with a flexible and high quality service. As such our various activities are built upon each other.

Thanks to our **commercial activities**, our customers can find a wide variety of geosynthetic materials in our portfolio. We introduced materials like BTL geomembranes and Schilder bale covers to the Hungarian and European markets.

We aim to become Europe's biggest fabrication facility with our prefabricated liners and geotextiles. As a result we were able to introduce innovative solutions in our installation business that result in a faster and more economical service.

Our installations are mainly focused on waterproofing, as such the pond of Kincsem park, the firewater tank of Westend City Center and the water features of a Hollywood movie are also among our work. At the same time, we strive to meet the needs of our customers with additional services. If needed, we provide a complete solution from design to construction.

We greatly appreciate your interest!
